Introduction

What: We have created a survey titled “Impact of social media influencer” in Google form and circulated it.

Why: We hoped to find out the level of impact of influencers, whether it is positive or negative, and how we could direct it towards public health.

How: We took the results from the survey, and used Excel to analyse it and PowerPoint to depict it.

Data

Since we have only taken categorical data: nominal data(Gender, section) as well as ordinal data (everything else) we have only analysed the data using mode, skewness and kurtosis.

We have received 112 responses.

Data analysis

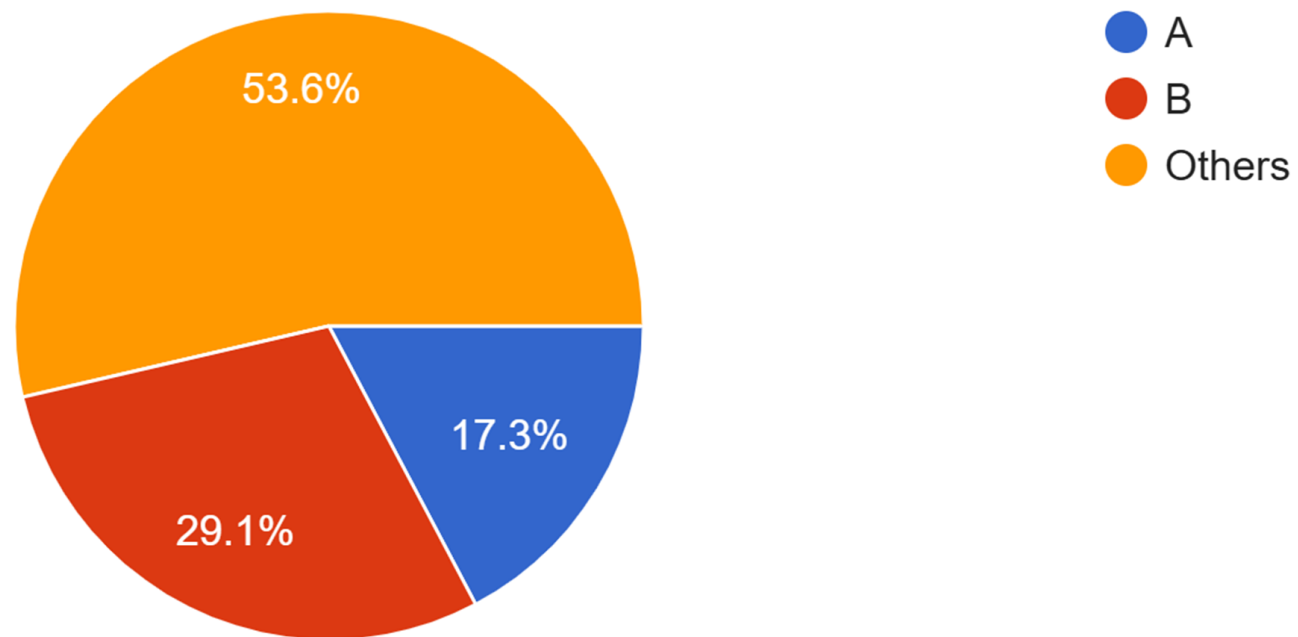

General question 1: What Section are you from?

Code	Section	Number
1	A	19
2	B	32
3	Others	59

Mode = 3

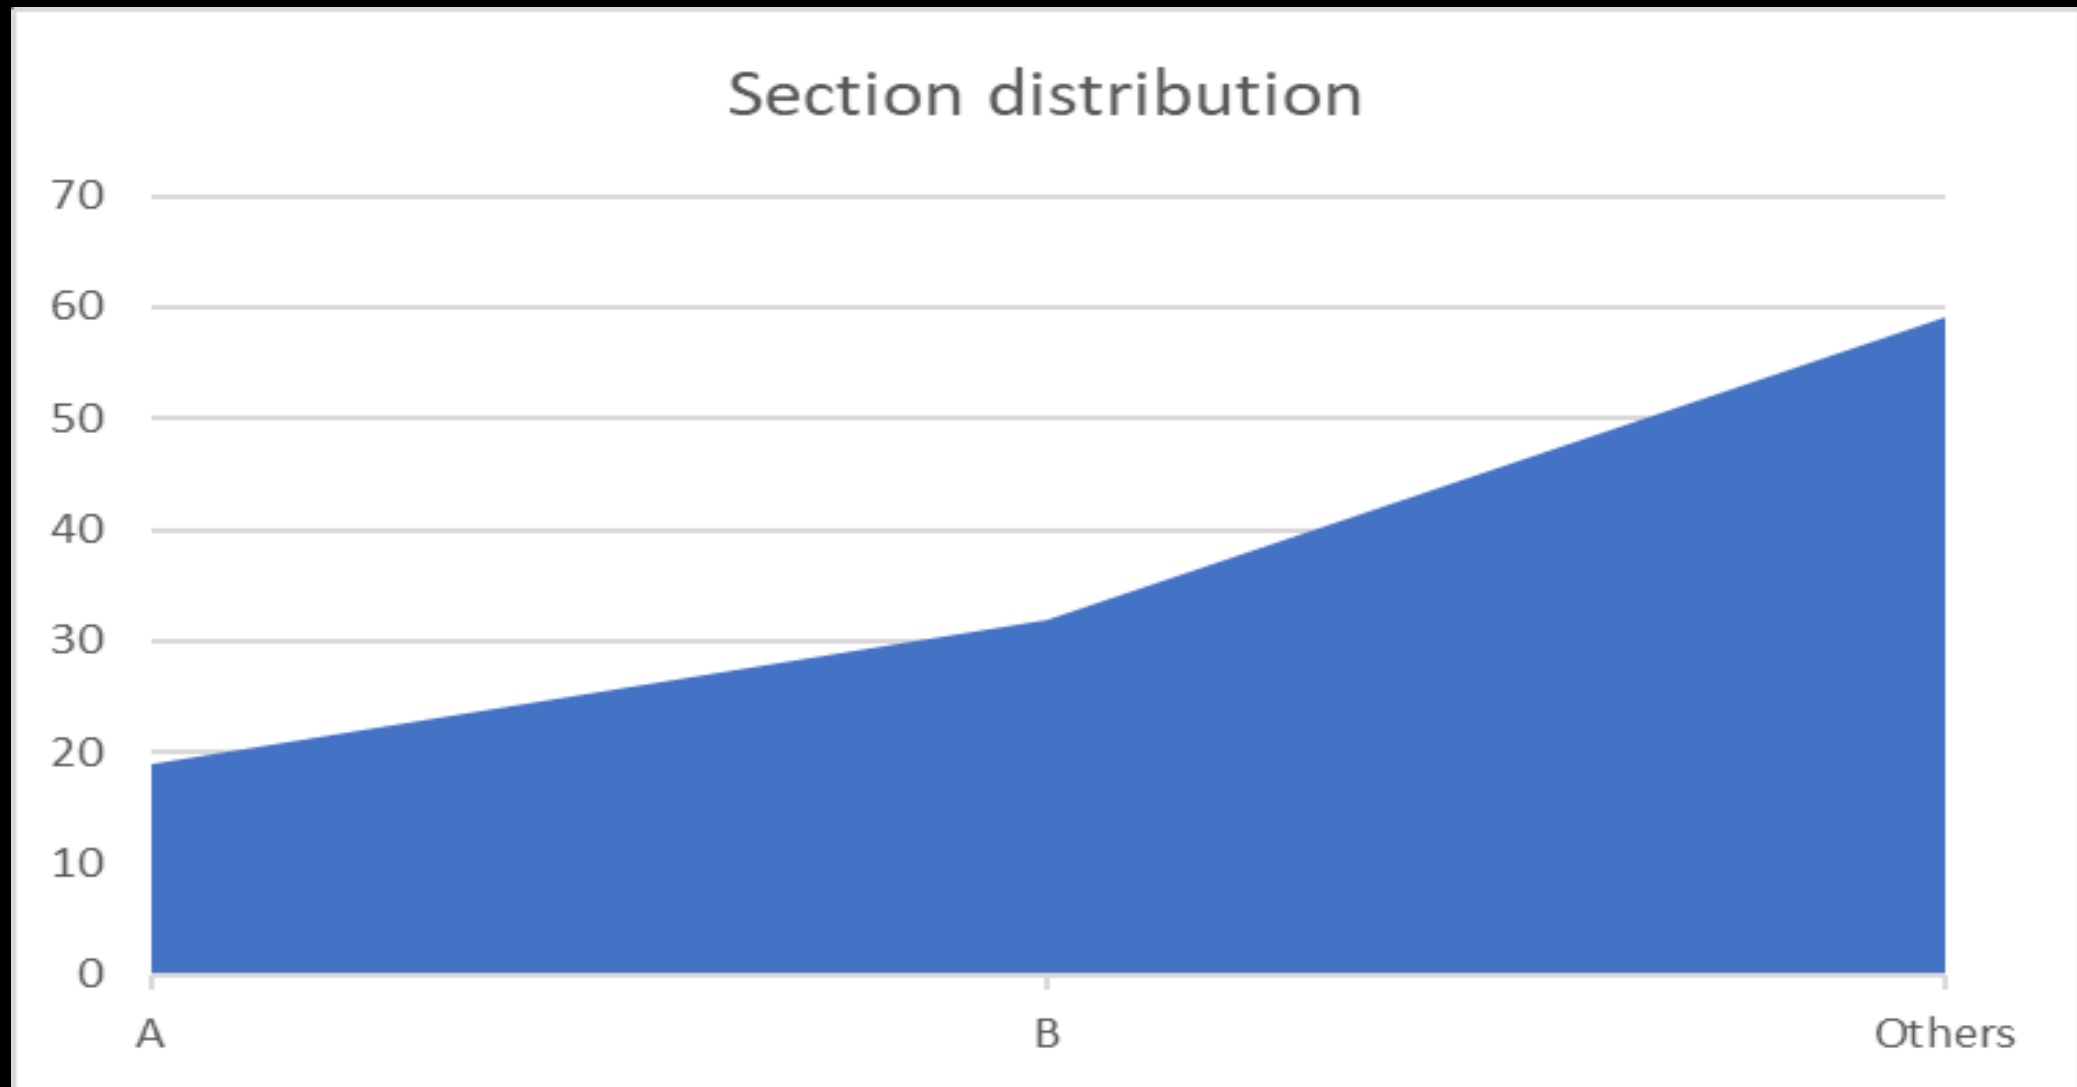

Section

110 responses

Skewness: -0.91249

Kurtosis: -0.72604

Inference: Most of the survey results come from people outside of our sections.

Insight: Most students/young people do not like filling forms and would rather spend time on Instagram.

Recommendation: We would recommend offering incentives to students to fill the form or just circulate it to older people.

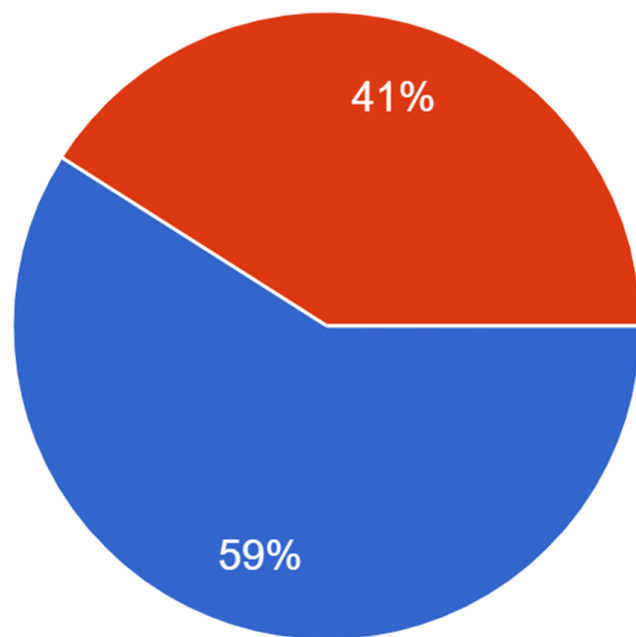

General question 2: What is your gender?

Code	Gender	Number
1	Male	59
2	Female	41
3	Transgender	0

Mode = 1

Gender

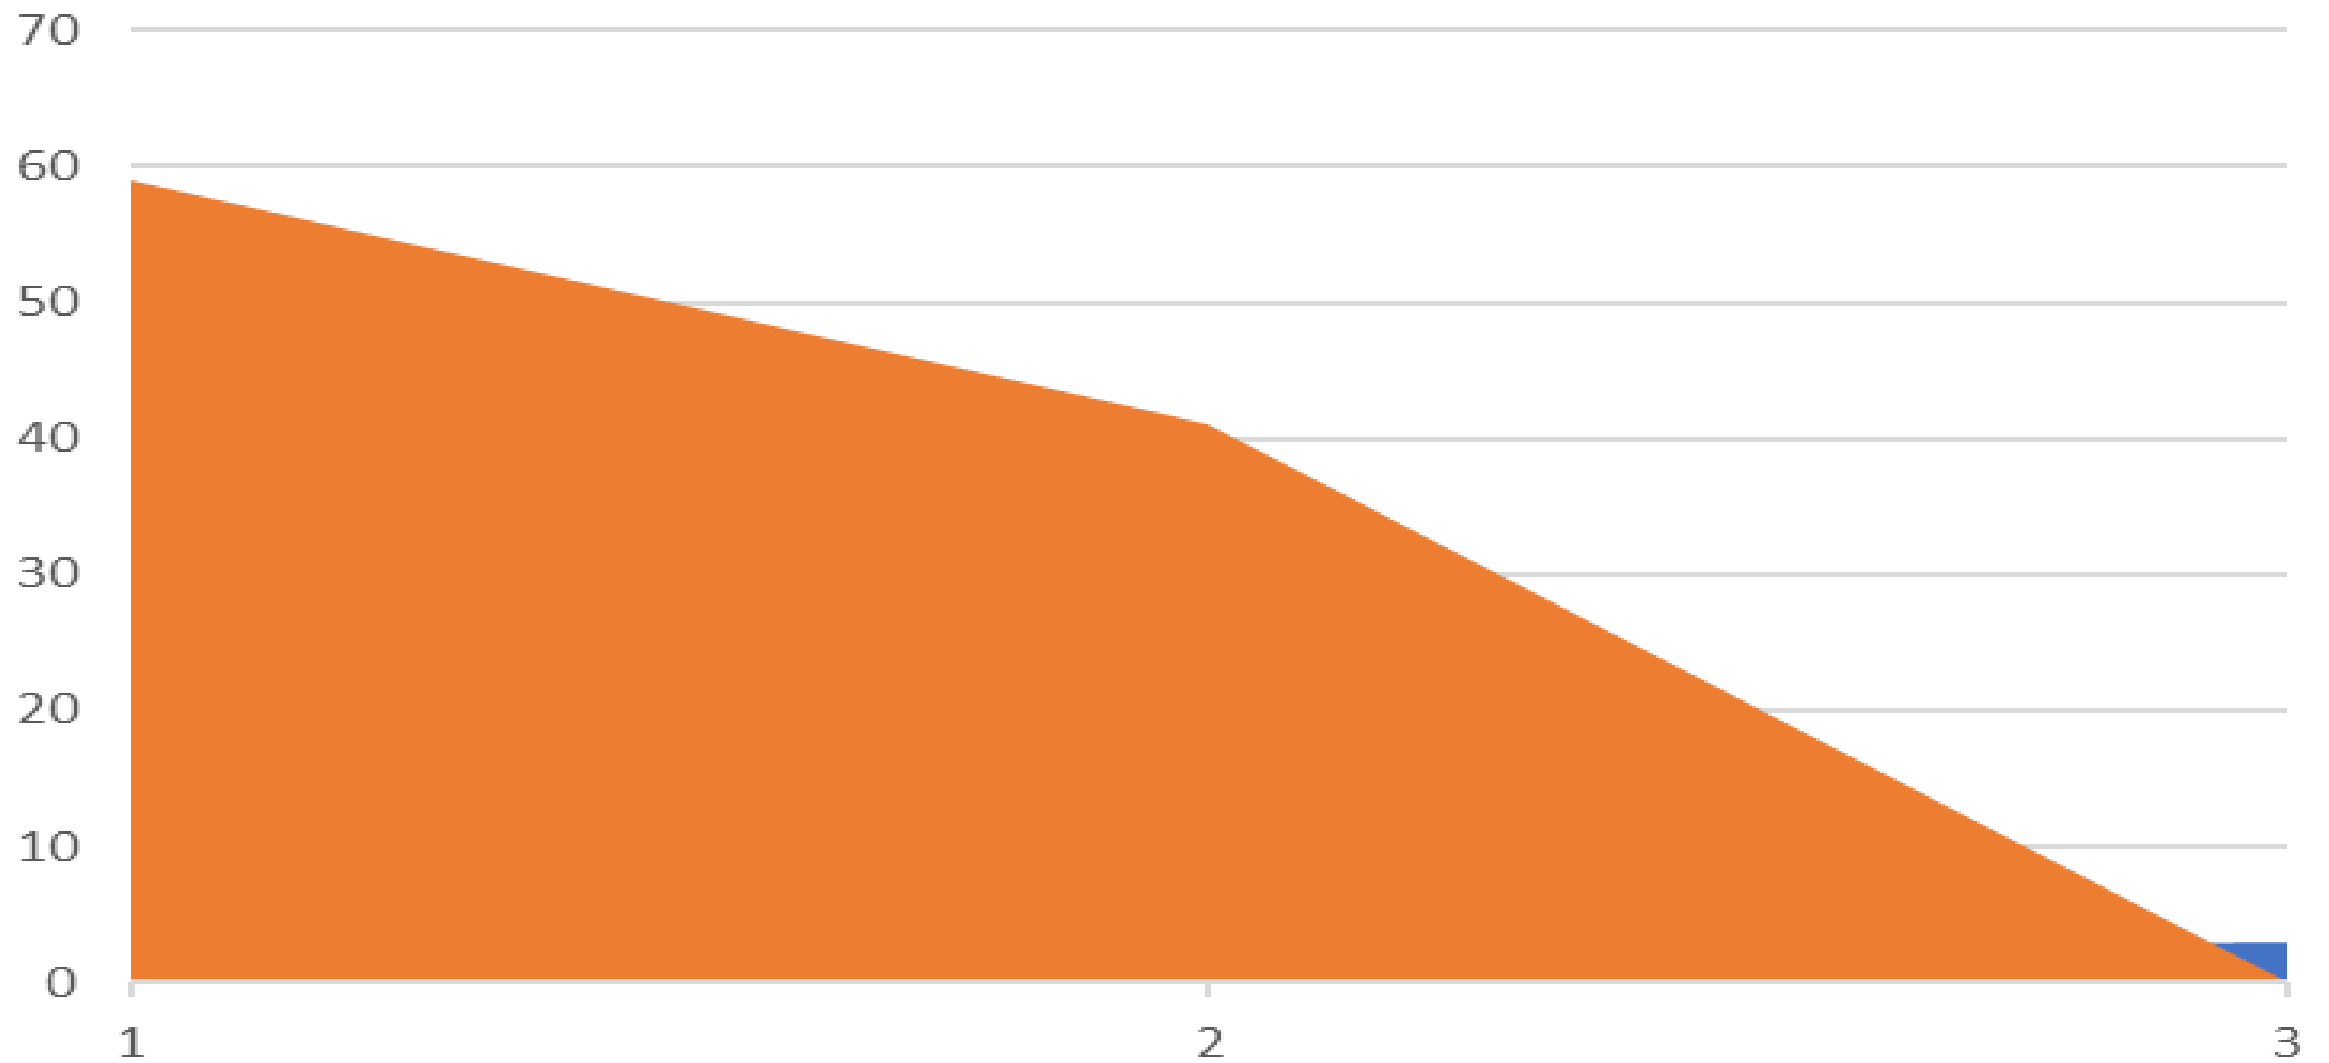

100 responses

- Male
- Female
- Transgender

Kurtosis -1.900351094

Skewness 0.371574663

Inference: Most response are from male humans.

Insight: All 4 of us are boys so our friends are mostly male.

Recommendation: We should talk to more girls.

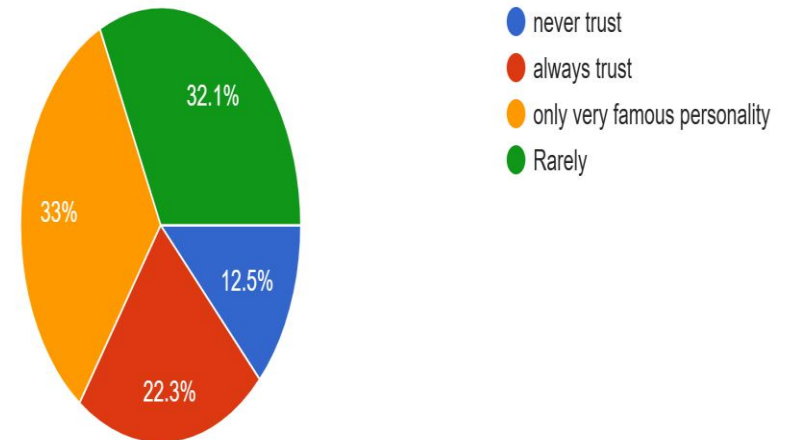

1. How often do you trust the recommendations of social media influencers?

Statement	code	Numbers
Never trust	1	14
always trust	2	25
only very famous personality	3	37
rarely	4	36

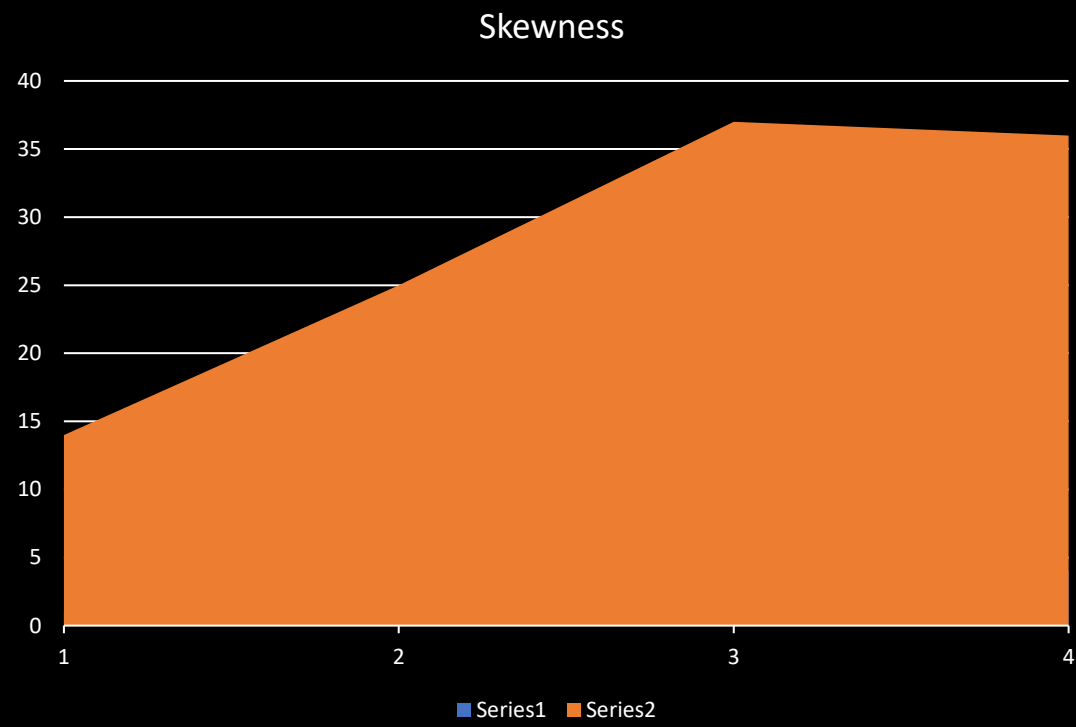

Mode = 3

1. How often do you trust the recommendations of social media influencers?

112 responses

skewness	-0.809431287
Kurtosis	-1.462285714

- Inference:

- People seem to correlate the level of trust they place in an influencer with their fame. Only well-known personalities are likely to be trusted widely. This suggests that micro-influencers or lesser-known influencers may struggle with building trust.
- With a large number of respondents leaning toward "rarely trust" or "only trust very famous personalities," there is an opportunity for influencers, especially those not as famous, to work on building credibility through transparency, expertise, or by providing more authentic content.

- Recommendation:

- Influencers should focus on being transparent about product placements, sponsorships, and endorsements. By sharing more personal stories, real-life examples, and offering genuine advice, they can increase trust among skeptical audiences.
- For audiences that rarely or never trust influencers, brands and influencers should use data driven content and real customer testimonials to boost the perception of authenticity. Focus on delivering value rather than pure promotion to build trust over time.

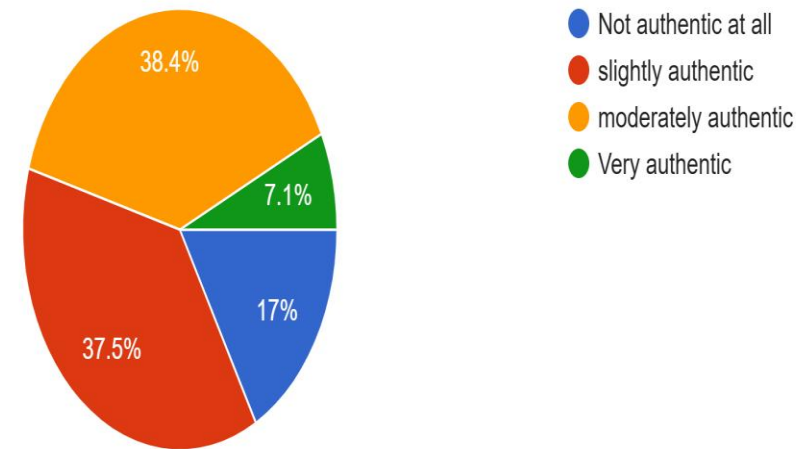

2.How authentic do you find social media influencers?

Statement	Code	Numbers
Not authentic at all	1	19
Slightly authentic	2	42
Moderately authentic	3	43
Very authentic	4	8

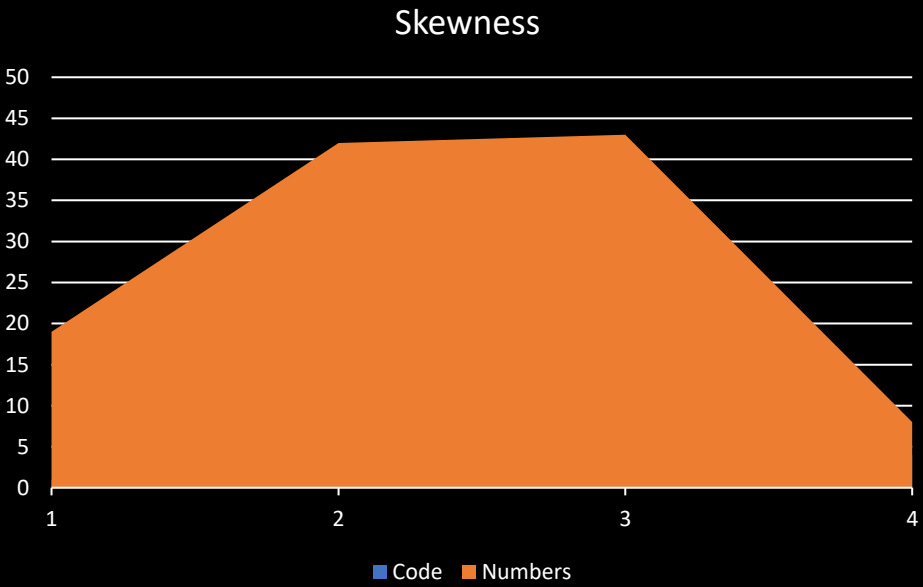

Mode = 3

2.How authentic do you find social media influencers?*

112 responses

Skewness	-0.333750038
Kurtosis	-4.075193829

- Inference:

- Influencers struggle with maintaining a high level of perceived authenticity. While many are viewed as **moderately authentic**, the large number of respondents rating them as only **slightly authentic** or **not authentic at all** suggests that audiences often doubt the genuineness of their endorsements or content.
- Since Moderately authentic option is the mode, it shows that audience necessarily dismiss influencers entirely but don't place them at the highest level of trust either. They perceive influencers as somewhat trustworthy, but they are aware of the potential commercial or strategic motives behind their recommendations.

- Recommendation:

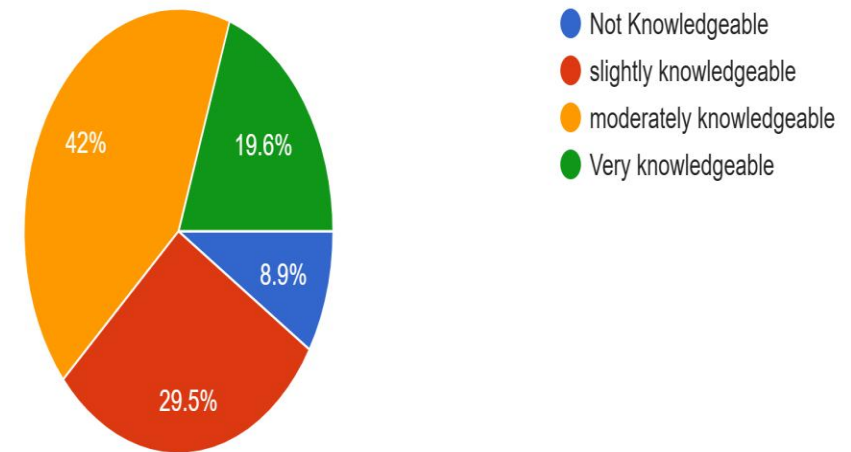

- **Influencers** should focus on being **transparent** about their partnerships and financial relationships. Clearly disclosing sponsorships, product placements, or paid collaborations can build trust and help audiences differentiate between genuine recommendations and commercial content.
- **Consistency** is key to building long-term authenticity. Influencers should consistently engage with their audience, provide value, and avoid promoting products that don't align with their values or expertise, as inconsistent behavior can foster distrust.

3. How knowledgeable are social media influencers in their niche?

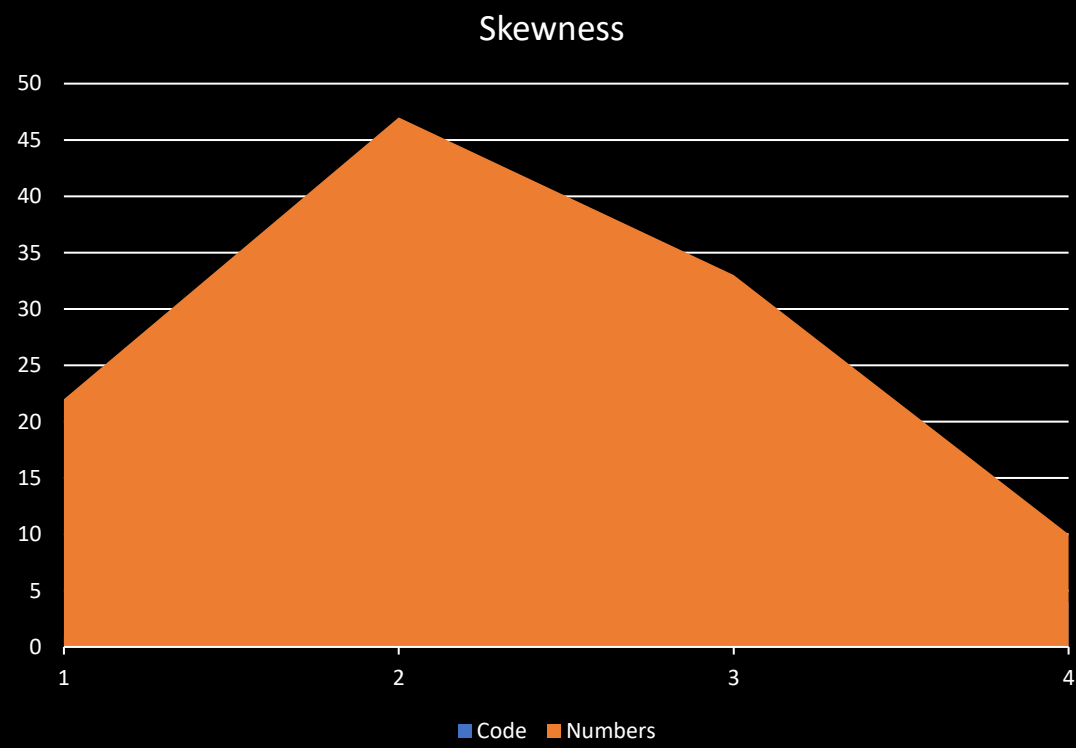

Statement	Code	Numbers
Very Knowledgeable	1	22
Moderately Knowledgeable	2	47
Slightly Knowledgeable	3	33
Not Knowledgeable	4	10

3.How knowledgeable are social media influencers in their niche?

112 responses

skewness	0.15913226
kurtosis	-0.712335315

- Inference:

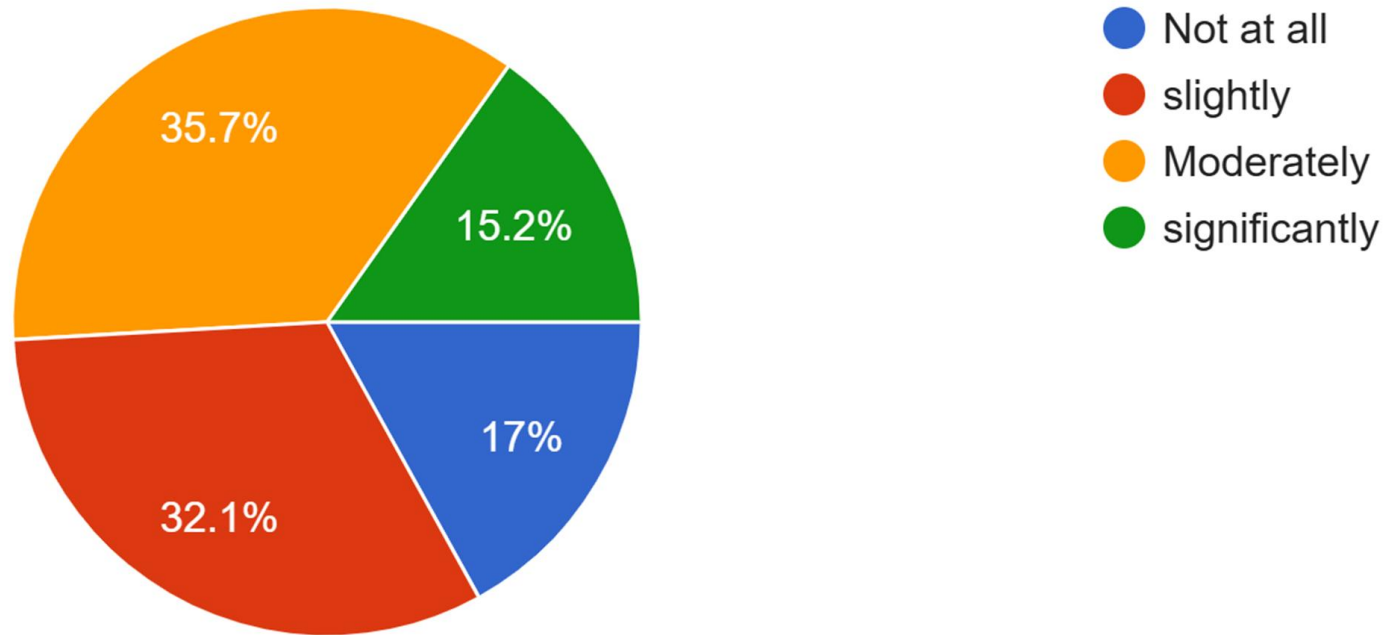

- Since the majority of respondents see influencers as **moderately knowledgeable**, this implies that influencers are perceived to have a broad understanding of their niche but may not dive deeply into specialized knowledge. Audiences might appreciate influencers for their general insights but may not turn to them for in-depth expertise.
- The fact that a large number of respondents rated influencers as slightly knowledgeable indicates that influencers may not always be seen as reliable sources of expert knowledge. This could be due to the perception that influencers prioritize engaging content over deep research and expertise

- Recommendation:

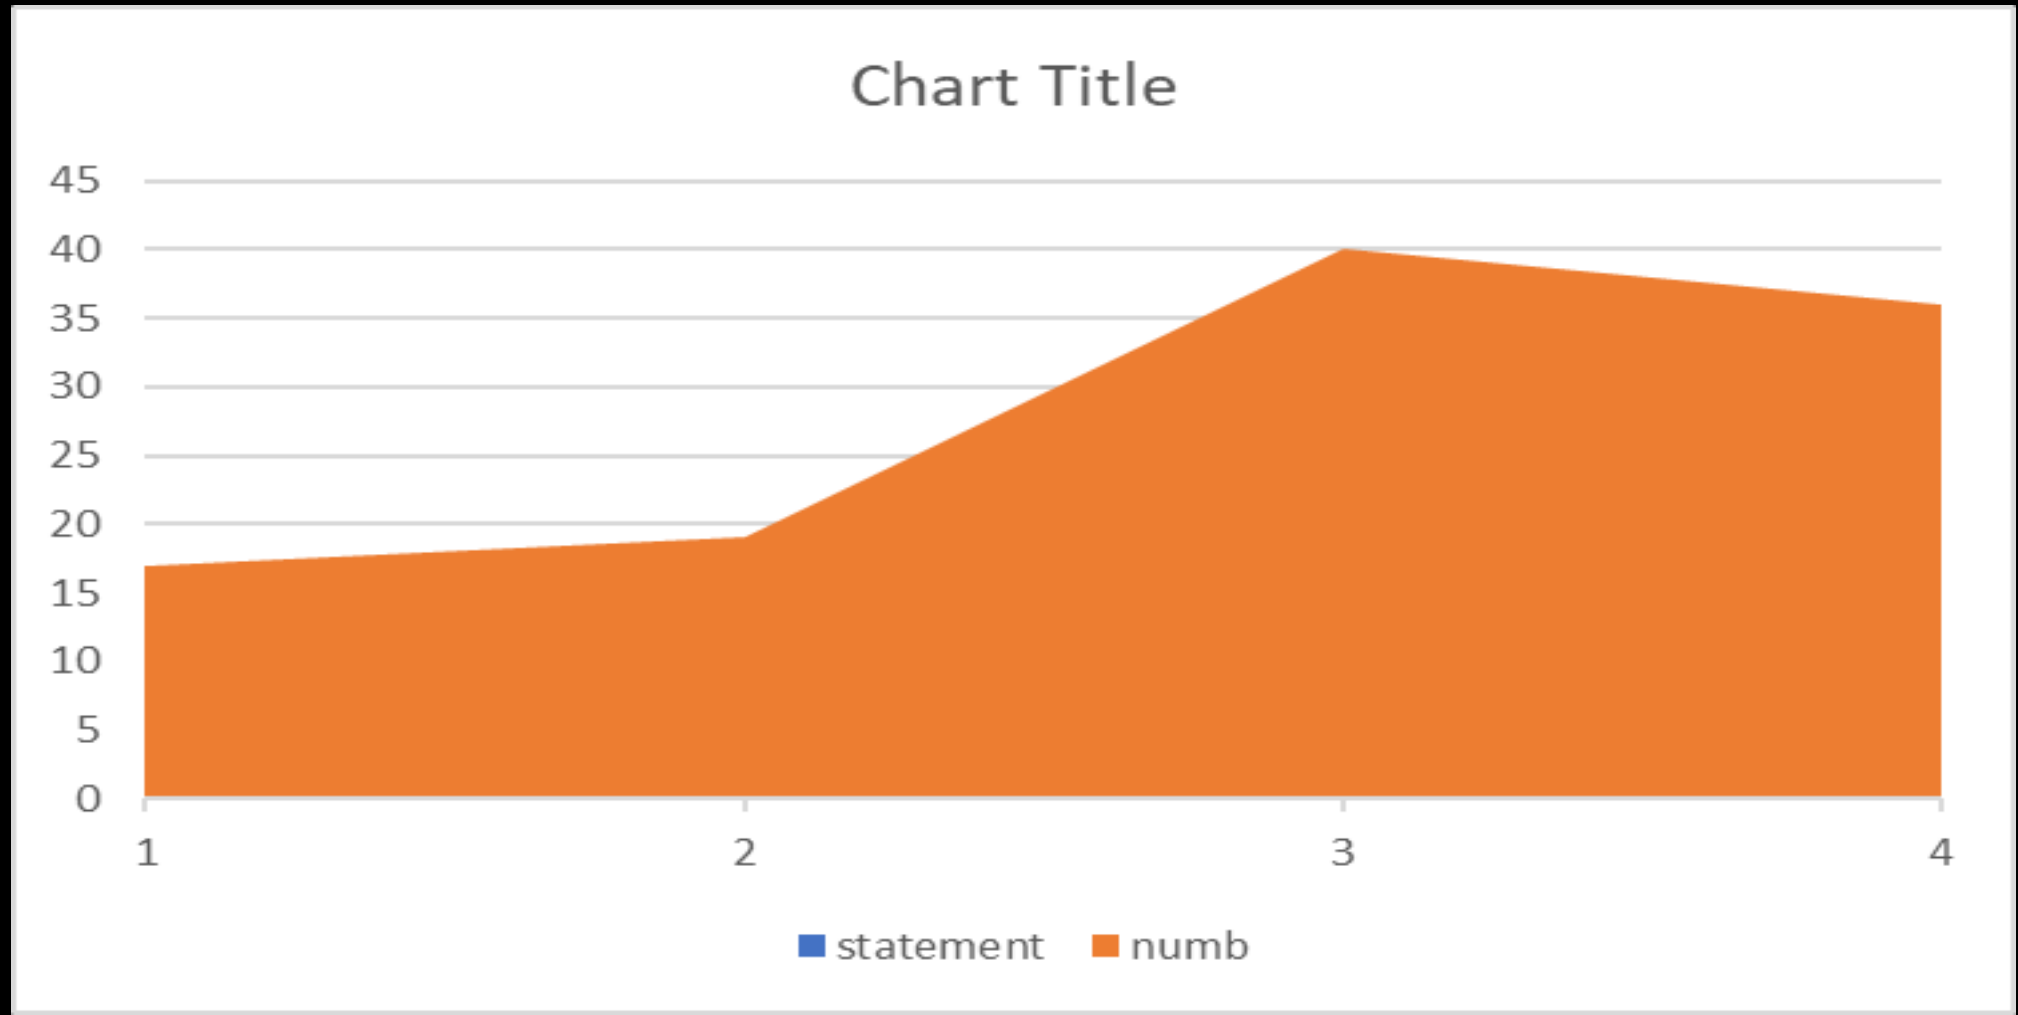

- Influencers can **collaborate with experts** in their niche to bolster their credibility. For example, partnering with professionals, researchers, or industry leaders can add depth to their content, making them more trustworthy as knowledgeable figures.
- Influencers should clarify when their content is **entertainment-focused** versus when it is **knowledge-based**. This differentiation will allow them to manage audience expectations. Influencers who focus solely on entertainment may not be expected to deliver deep insights, while those aiming to be industry experts should emphasize content depth.
- Instead of trying to cover a wide array of topics, influencers should consider focusing on a specific **niche** within their industry. Becoming an authority in a **specialized area** can boost their credibility as knowledgeable figures, as the audience may perceive them as more focused and in-depth in their content.

8.How much do social media influencers impact your fashion choices?

112 responses

skewness -0.51771073
kurtosis -0.888527296

Inference A significant portion of respondents (40%) report a moderate impact of social media influencers on their fashion choices.

Insight: there is a notable proportion of people who either experience significant influence or none at all.

Recommendation: They should consider whether these trends genuinely suit their style and needs, rather than following them blindly.

8.How much do social media influencers impact your fashion choices?

Code	statement	numb
`1	Significantly	17
2	Not at all	19
3	Moderately	40
4	Slightly	36

Mode = 3

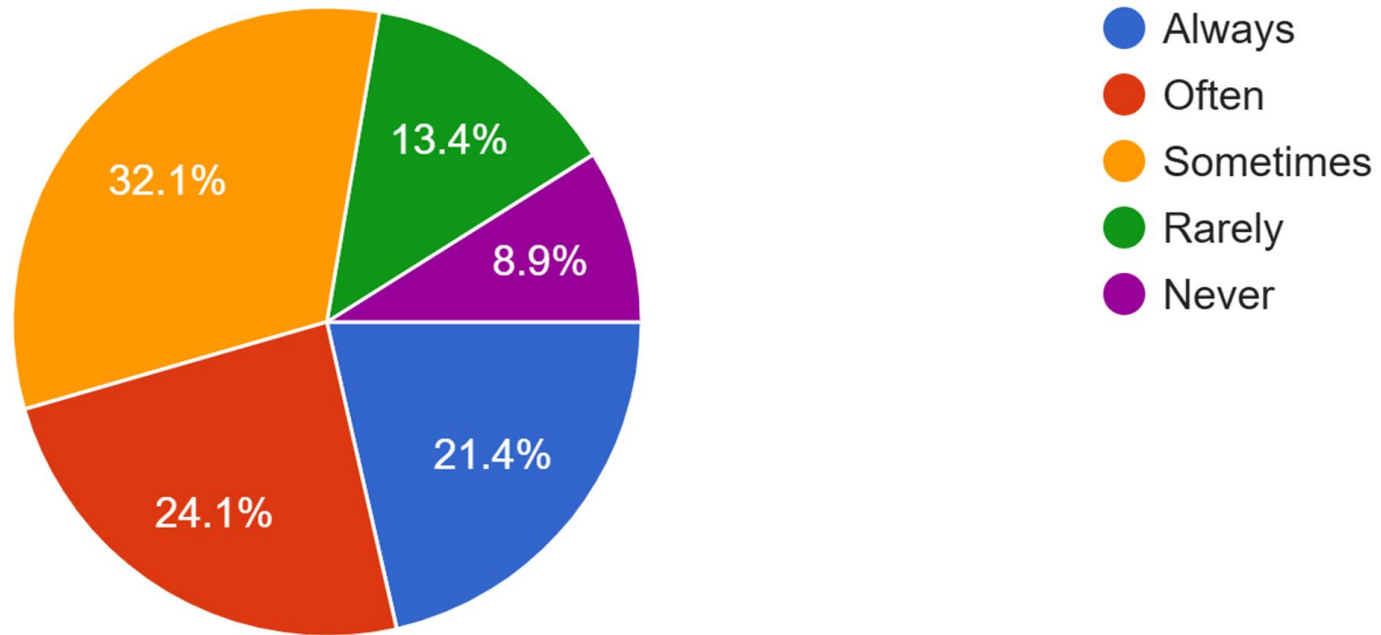

9.How often do you follow health and fitness advice from social media influencers?

Statement	Numbers
rarely	15
Sometimes	36
Often	27
Always	24
never	10

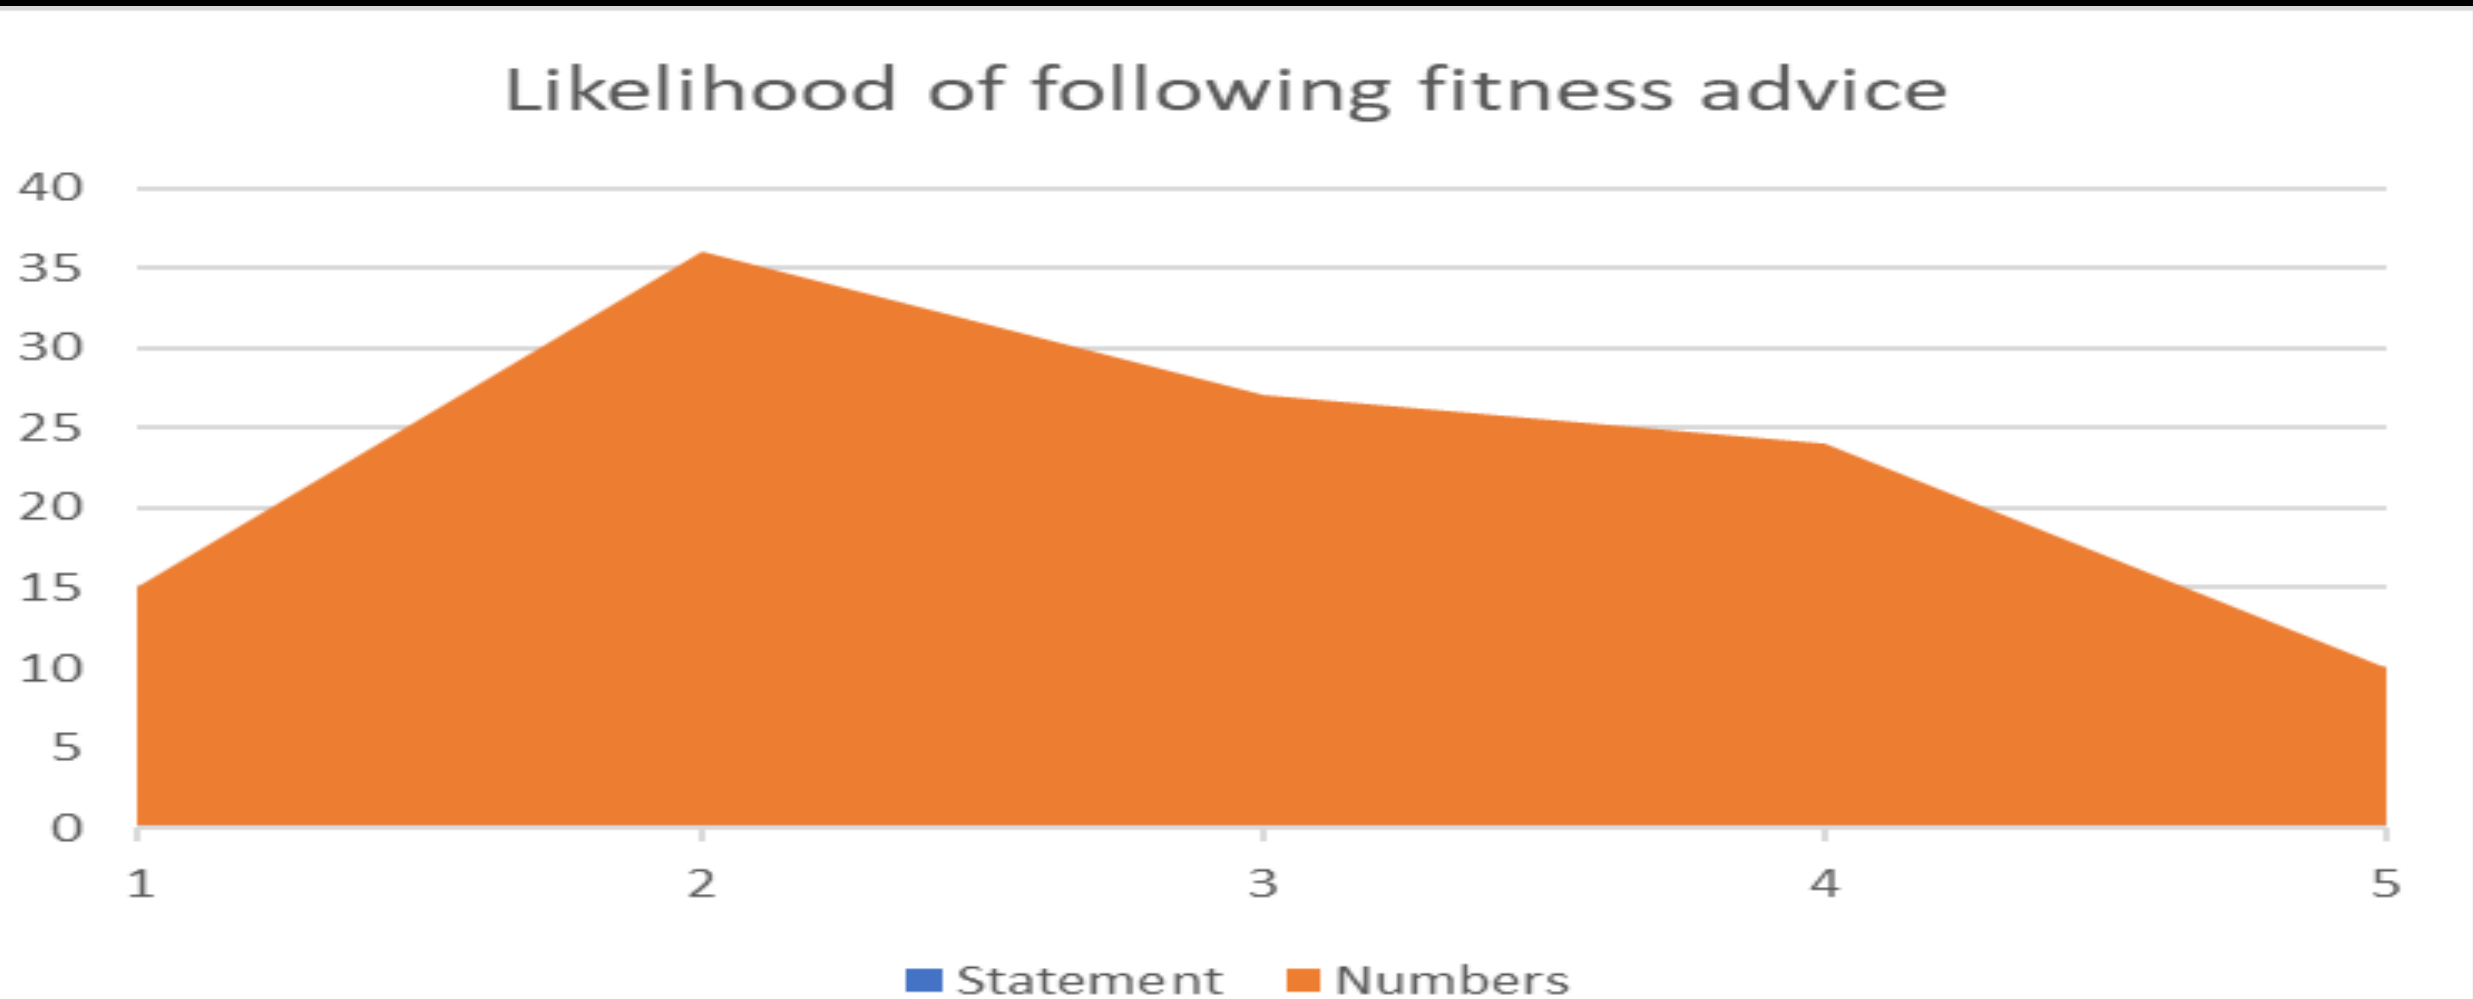

Mode = 2

9. How often do you follow health and fitness advice from social media influencers?

112 responses

Skewness 0.224151336 positive skew
Kurtosis -0.879862884 platykurtic

Inference About half of the respondents follow this advice either "often" or "always" (51%).

Insights: The fact that a sizable portion follows advice only "sometimes" or "often" rather than "always" implies that while influencers are influential, their advice is not always taken as gospel.

Consider adopting a balanced approach by integrating social media advice with professional guidance.

10. How much do social media influencers impact your beauty and skincare routine?

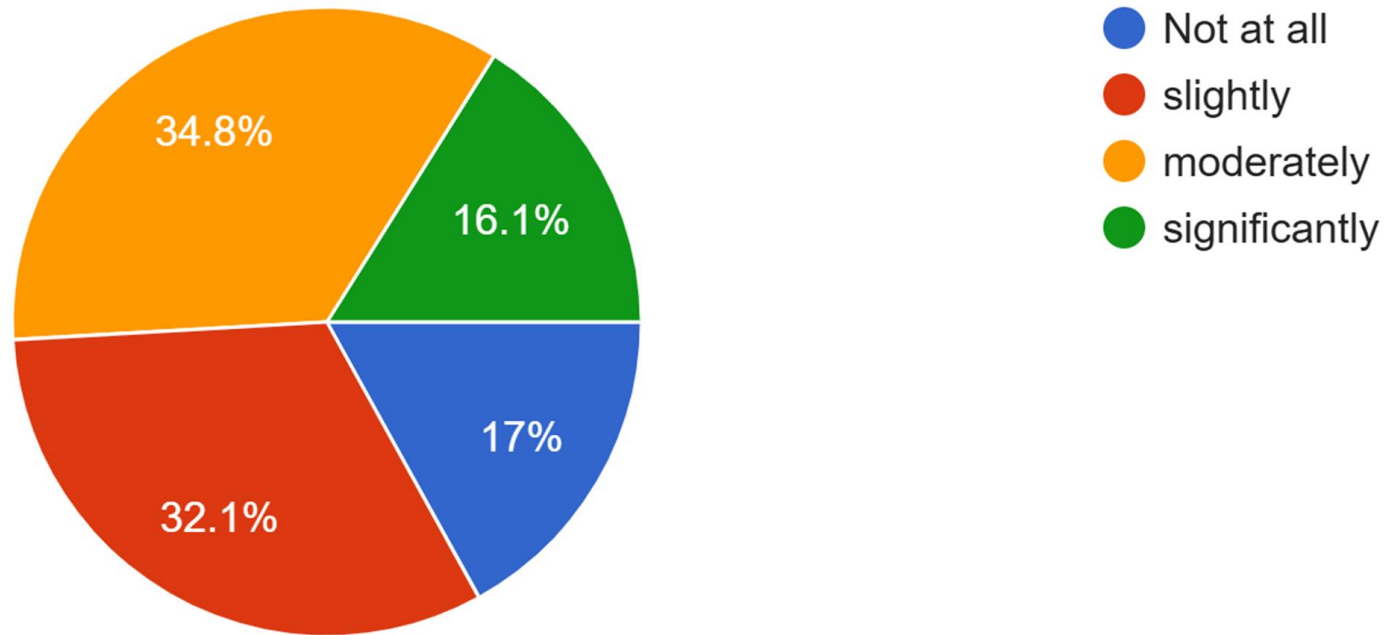

1

Code	statement	numb
1	Moderately	39
2	Not at all	19
3	Significantly	18
4	slightly	36

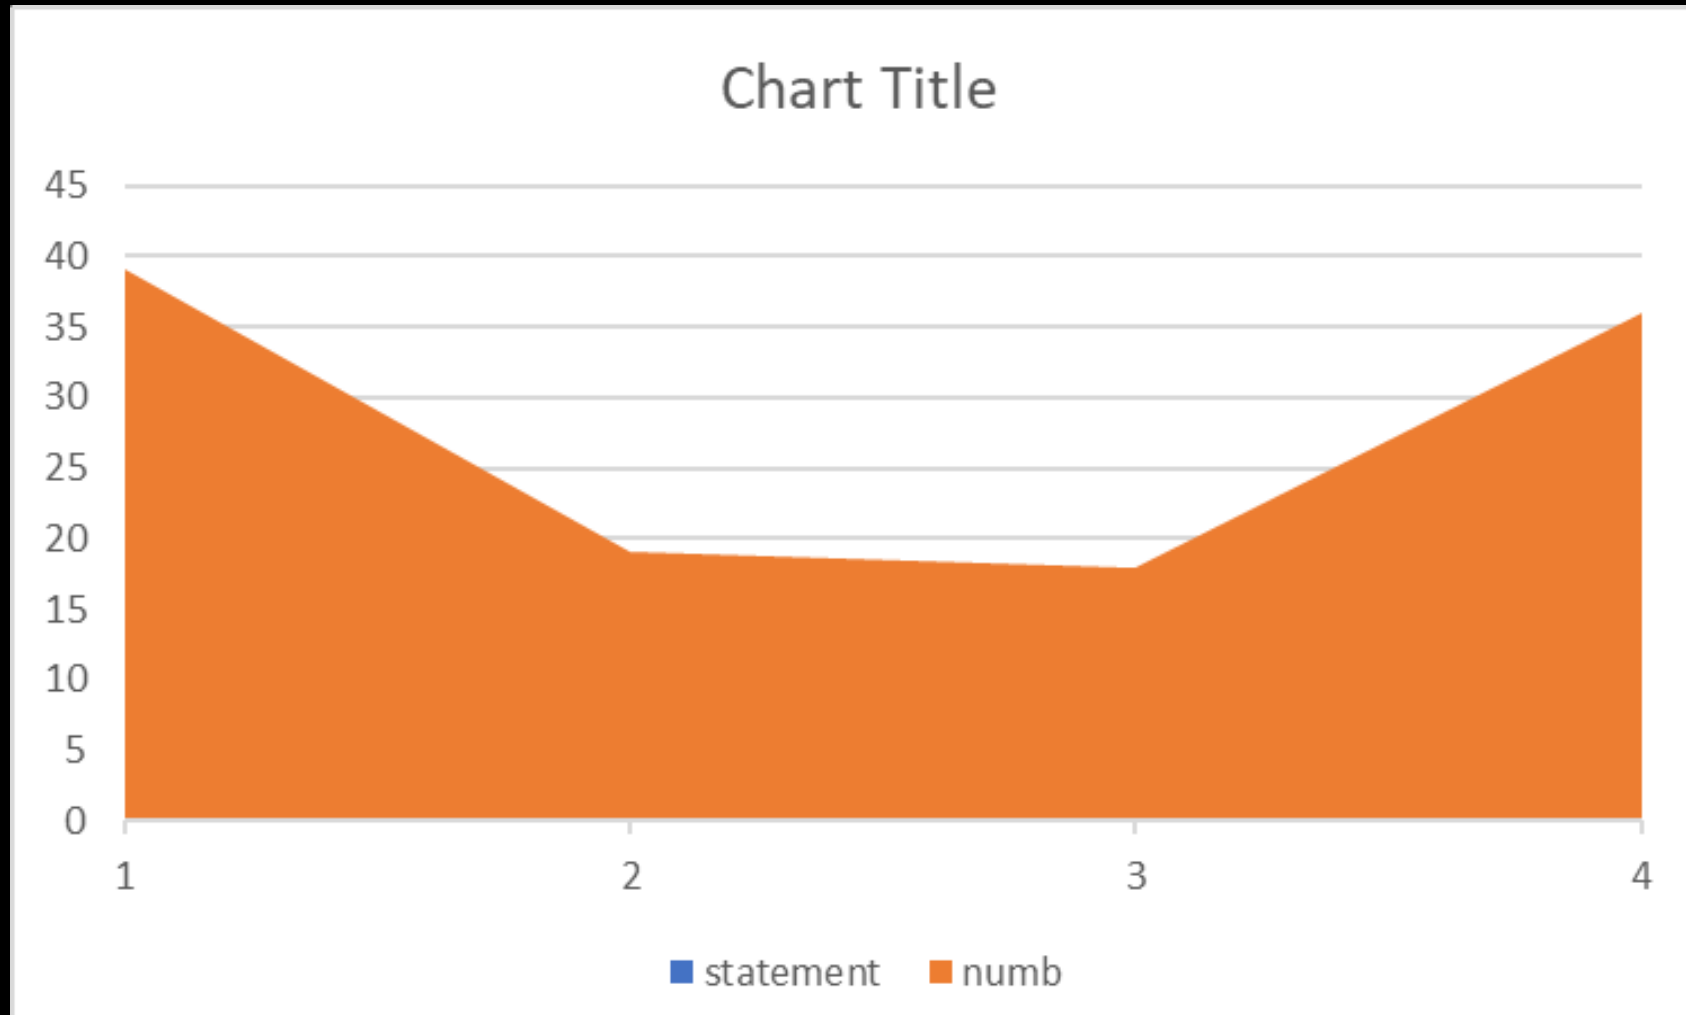

Mode = 1

10. How much do social media influencers impact your beauty and skincare routine?

112 responses

skewness 0.061409206
kurtosis -1.66555473

Inference The largest portion of respondents (39%) indicates that social media influencers impact their beauty and skincare routine “moderately.”

Insight Social media influencers have a varied impact on beauty and skincare routines, with the majority experiencing moderate to slight influence.

Recommendation: Encourage individuals to approach beauty and skincare advice from influencers with a critical eye.

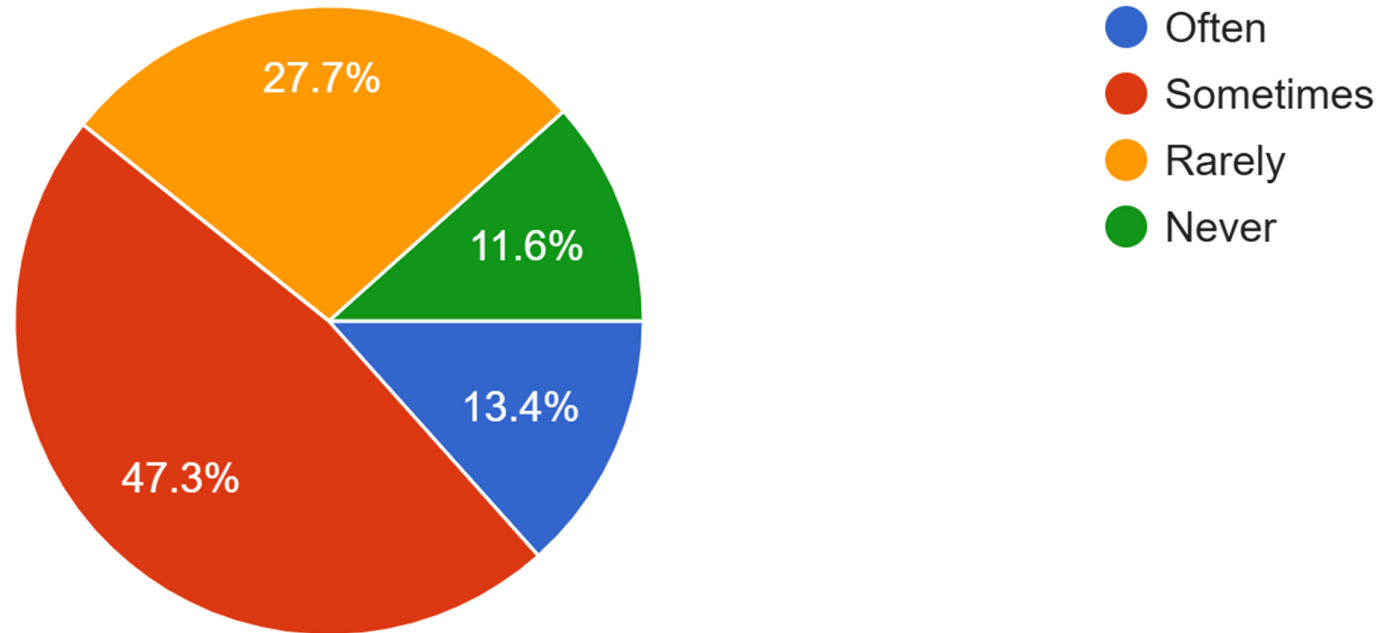

11. How often do you choose travel destinations based on social media influencers' recommendations?

Code	Statement	Numberes
1	Often	15
2	Sometimes	53
3	Rarely	31
4	Never	13

Mode = 2

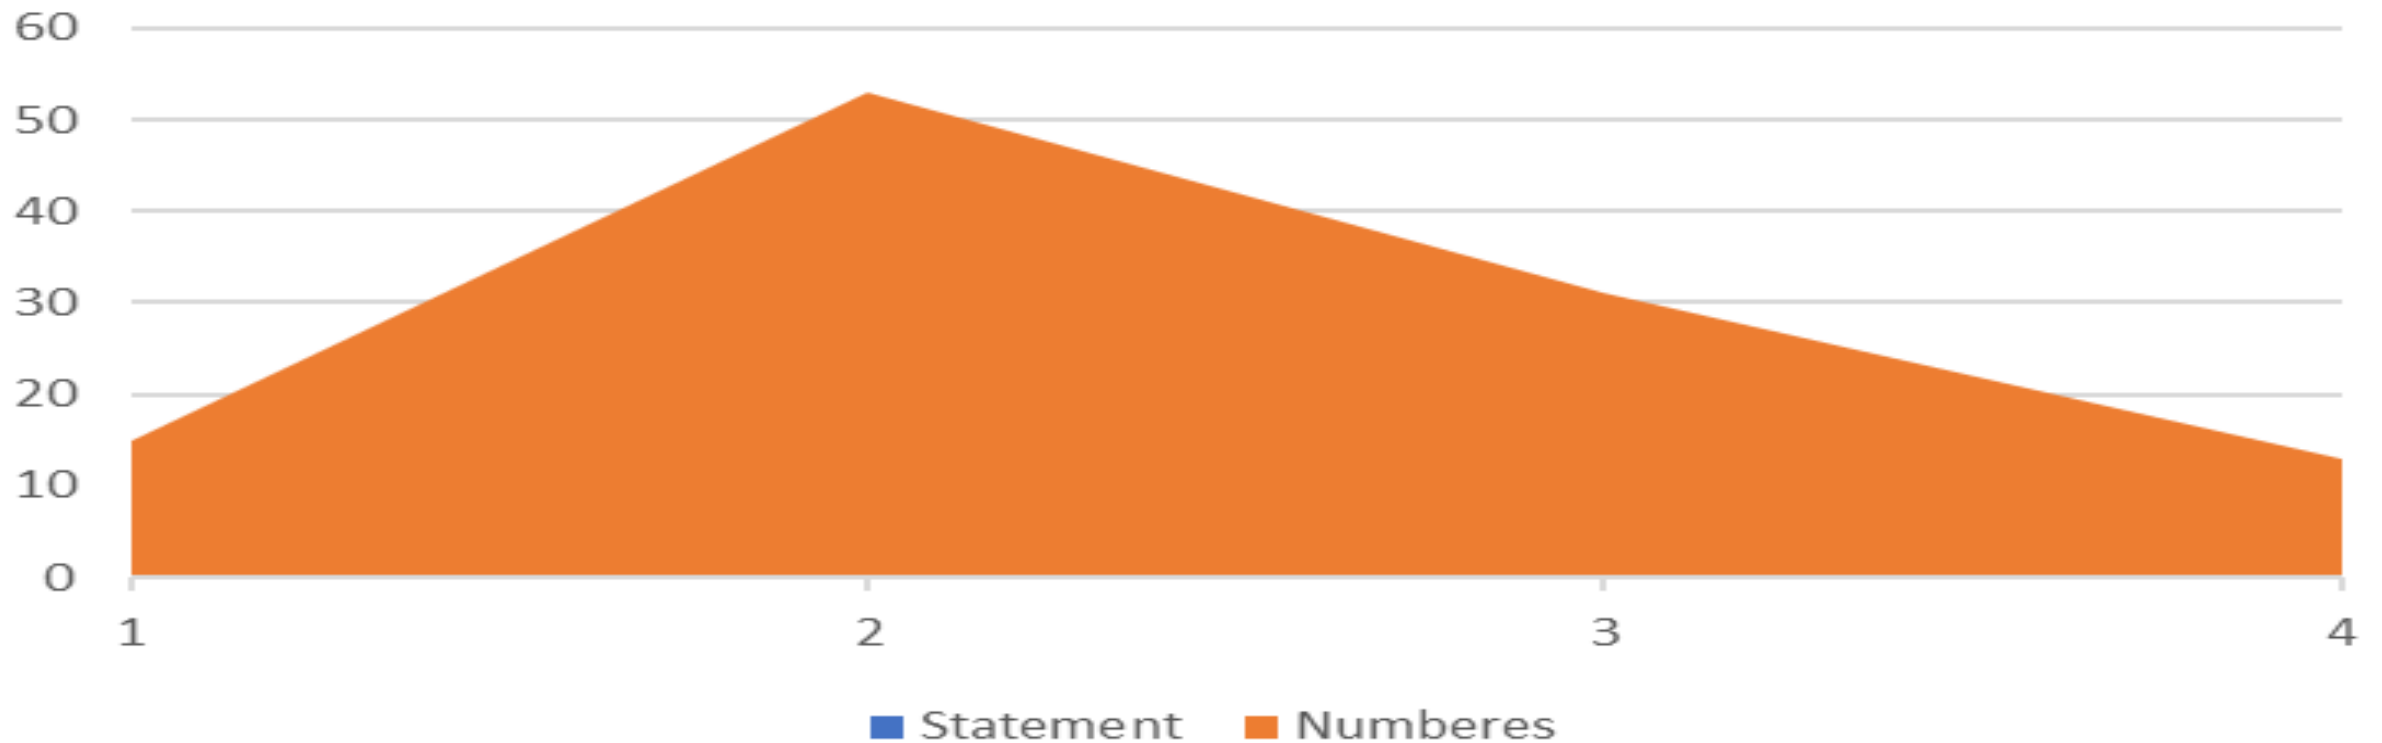

11. How often do you choose travel destinations based on social media influencers' recommendations?

112 responses

Kurtosis -0.484191115
Skewness 0.310085943

Likelihood of choosing travel destination from influencer

Inference: Influencers have a moderate impact on destination choices

Insight: People might need additional confirmation from friends, relatives or reviews before choosing.

Recommendation: Influencers can involve random people visiting and ask their opinions, can collaborate with local tourist agencies.

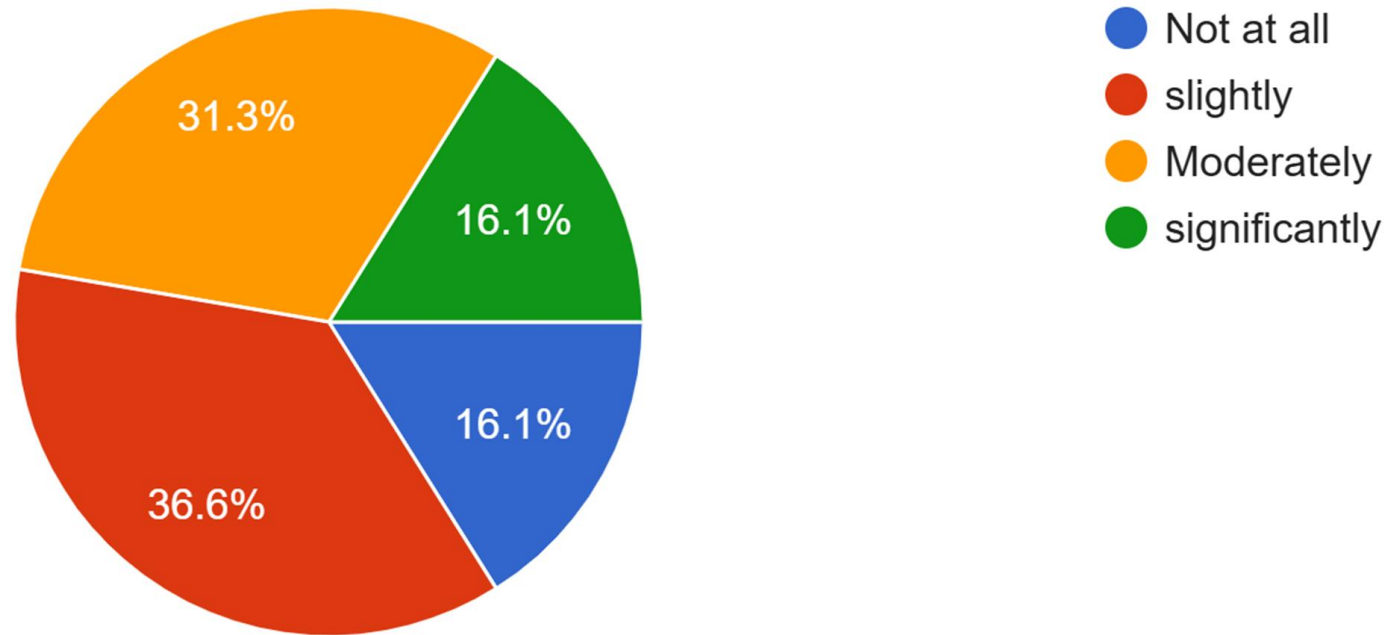

12. How much do social media influencers influence your dining choices?

Code	Statement	Numbers
1	Not at all	18
2	Slightly	41
3	Moderately	35
4	Significantly	18

Mode = 2

12. How much do social media influencers influence your dining choices?

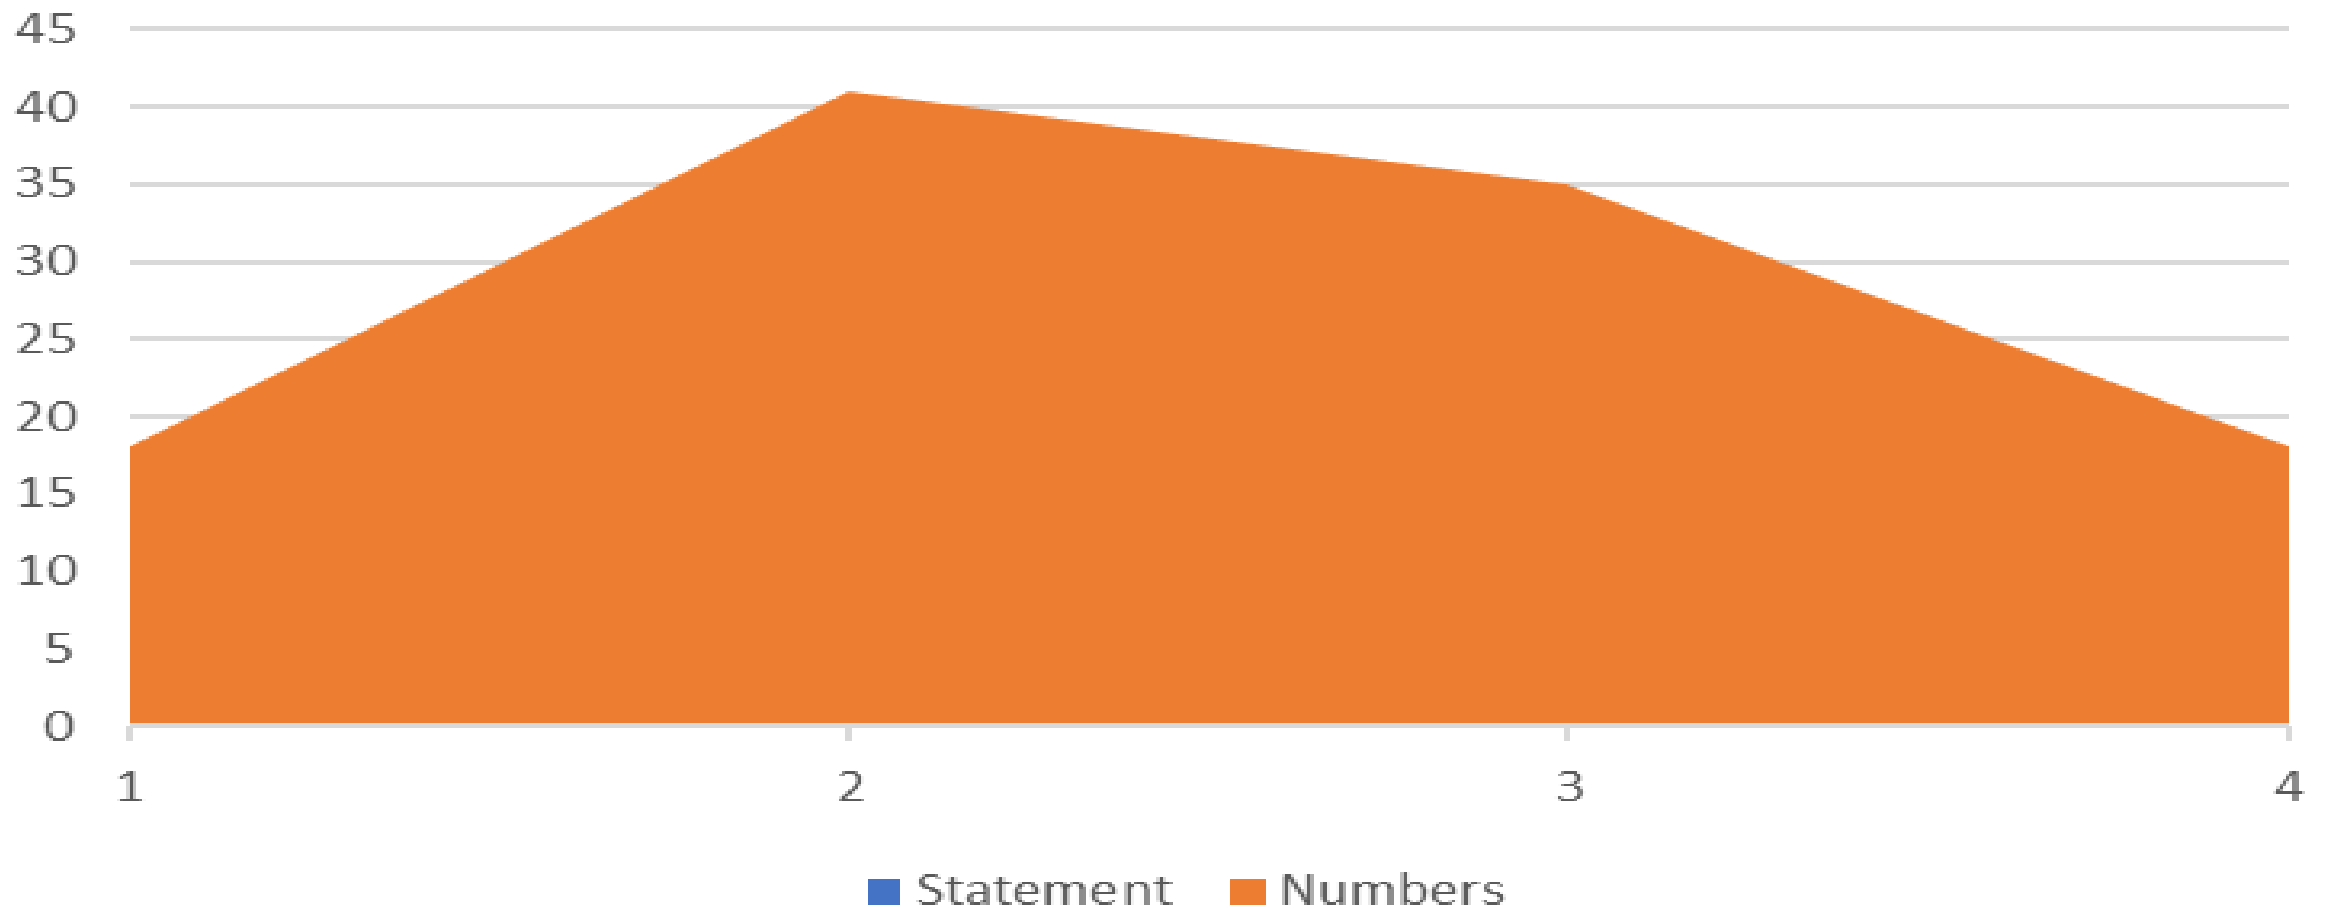

112 responses

Kurtosis -0.884189227

Skewness 0.07820346

Likelihood of influencers affecting dining choices

Inference: Majority sample have slight influence on dining choices.

Insight: Second biggest chose moderate, overall people are willing to choose dining choices based on influencers.

Recommendation: Influencers could help restaurants give feedback from customers on food choices.

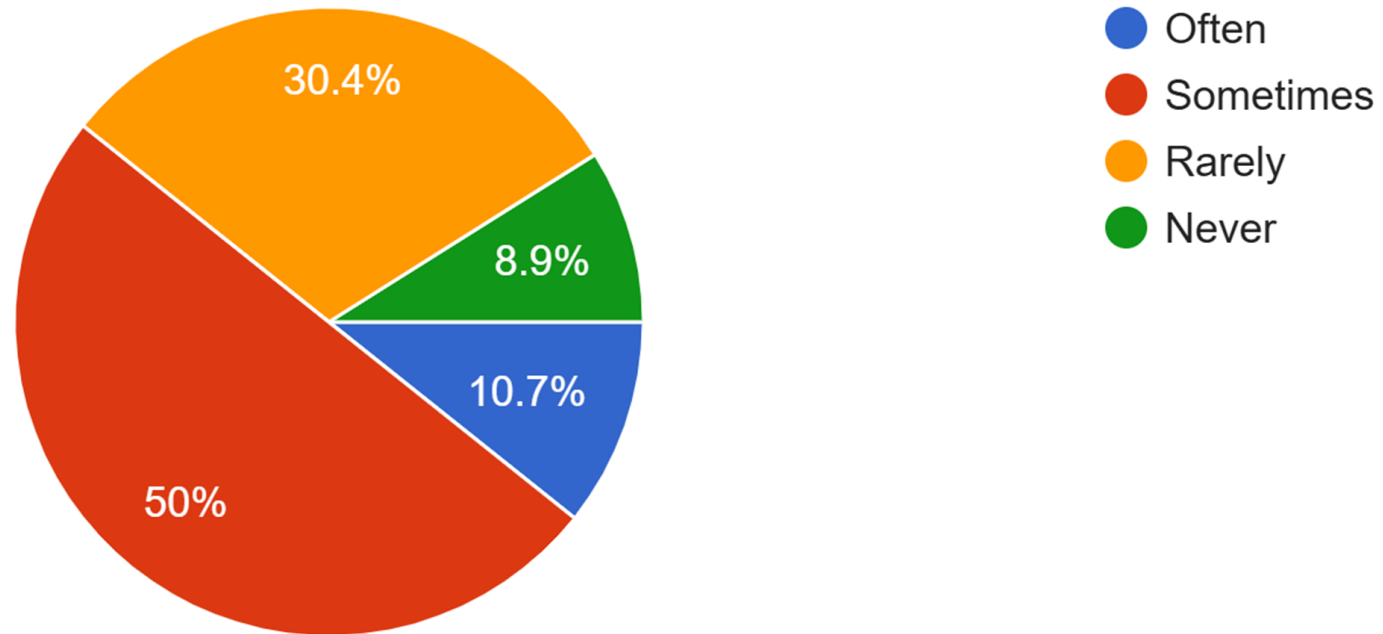

13. How often do you follow technology and gadget recommendations from social media influencers? .

Code	Statement	Numbers
1	Often	12
2	Sometimes	56
3	Rarely	34
4	Never	10

Mode = 2

13. How often do you follow technology and gadget recommendations from social media influencers?

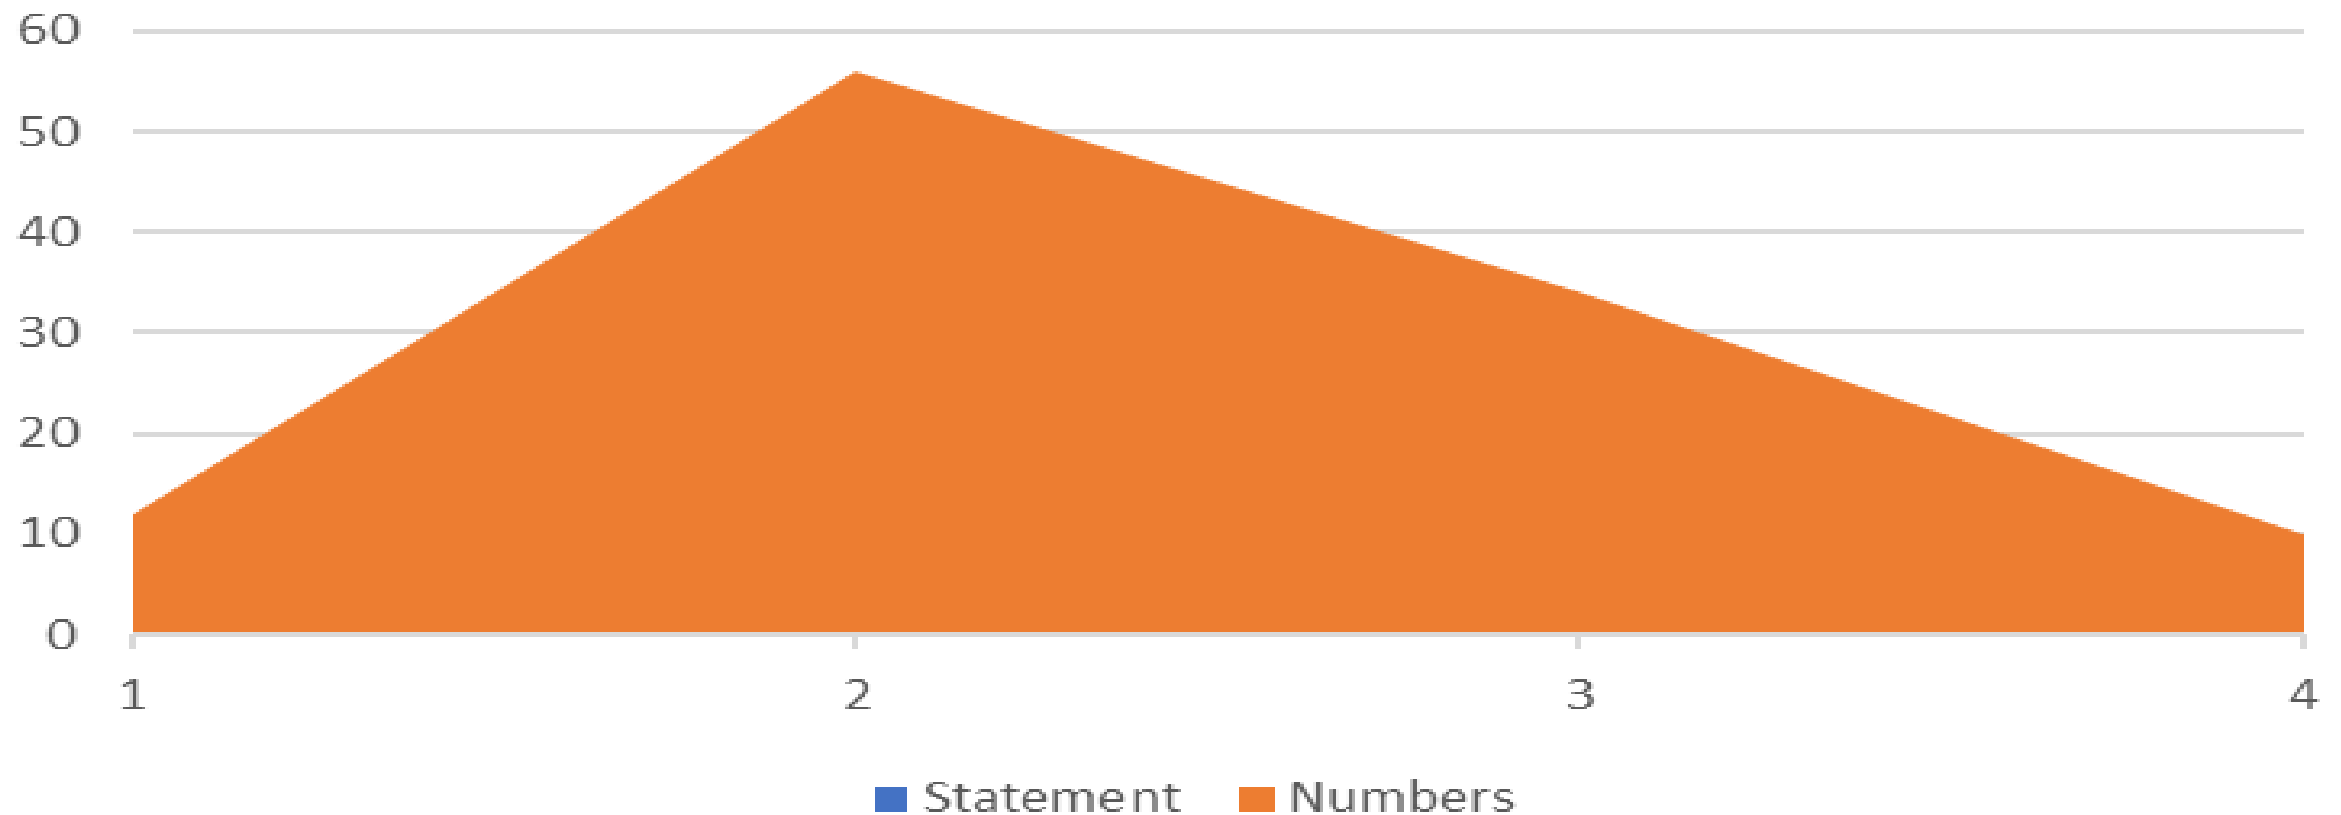

112 responses

Kurtosis -0.259531635

Skewness 0.310856533

Likelihood of following gadget recommendations from influencers

Inference: 50% of sample listens to influencer recommendations sometimes.

Insights: Lots of people have chosen rarely and never, maybe most influencers lack expertise.

Recommendations: Would recommend to collaborate with technical social media people or engineers.

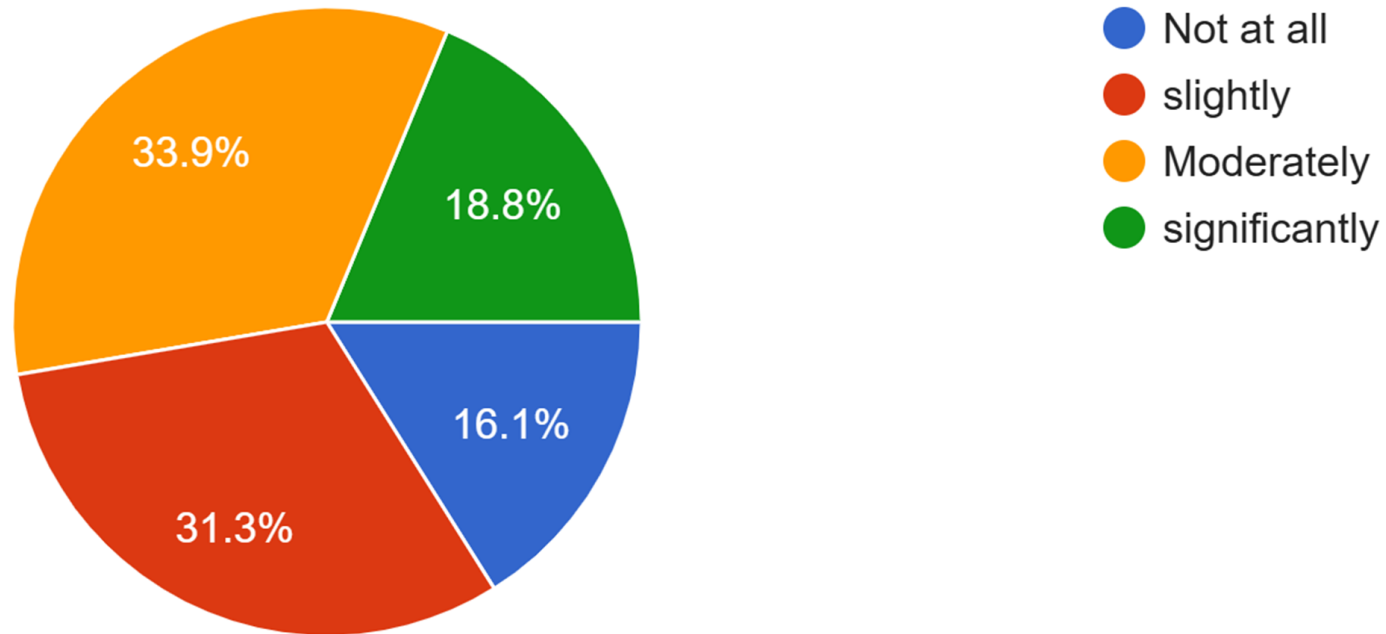

14. How much do social media influencers impact your entertainment choices (movies, music, etc.)?

Code	Statement	Numbers
1	Not at all	18
2	Slightly	35
3	Moderately	38
4	Significantly	21

Mode = 3

14. How much do social media influencers impact your entertainment choices (movies, music, etc.)?

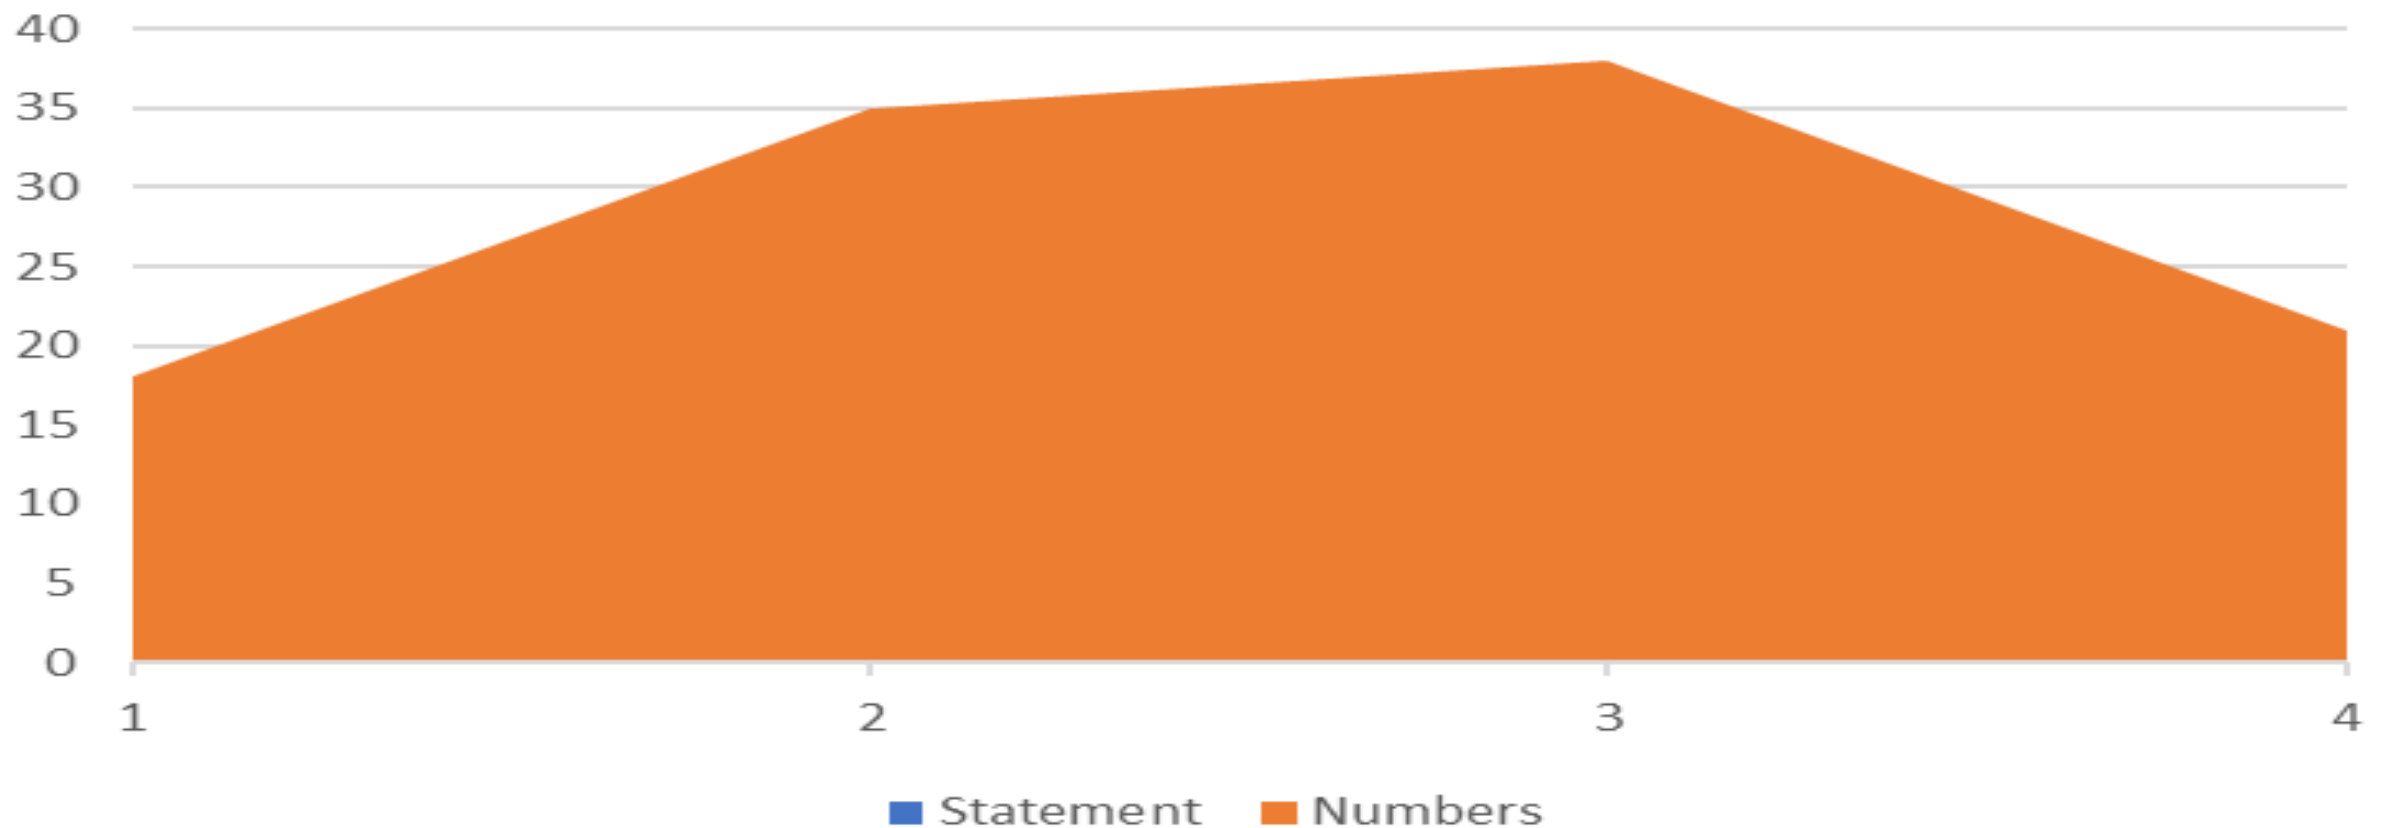

112 responses

Kurtosis -0.968075754

Skewness -0.064195561

Likelihood of influencers impacting media choice

Inference: Most people have chosen moderate influence on media choices.

Insight: The reason might be that personal tastes of audience do not match with the influencers' tastes.

Recommendations: Influencers can involve people with different media tastes, so they can attract wide audience.

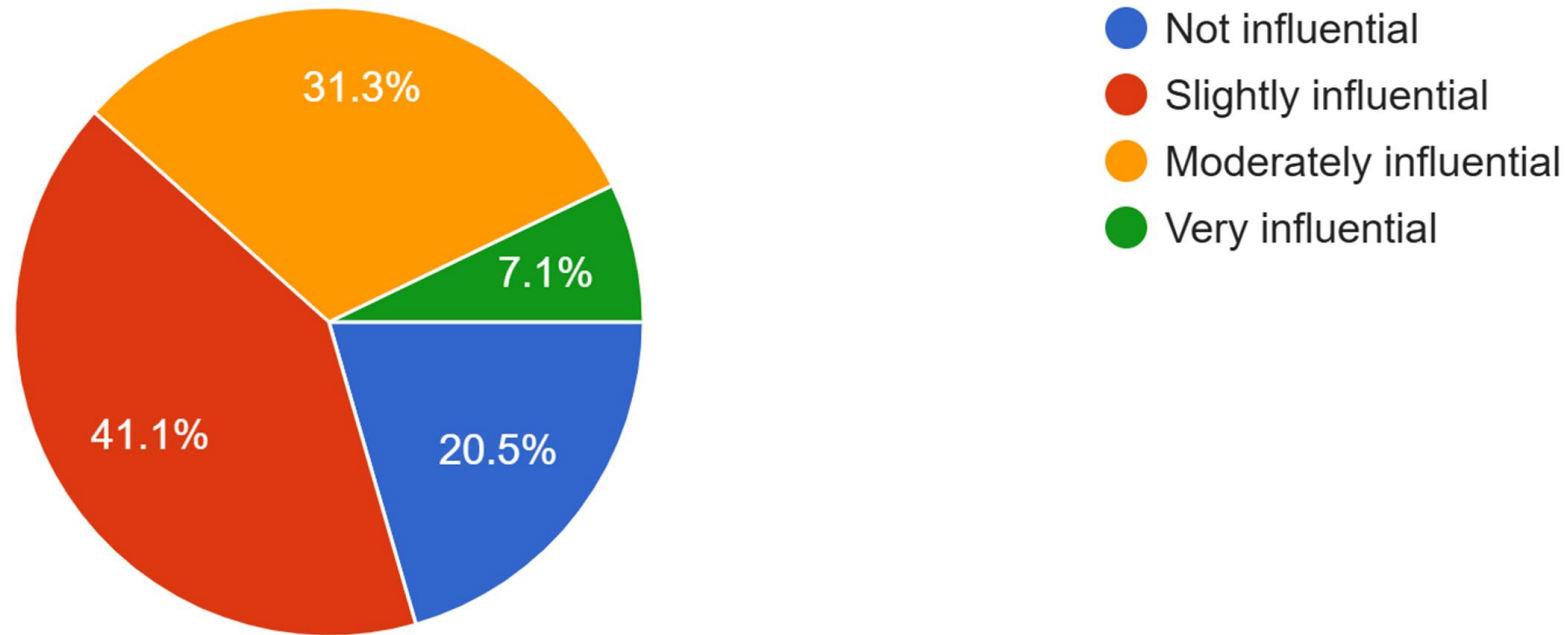

15. Overall, how influential are social media influencers in your daily life ?

Code	Statement	Numbers
1	Not influential	23
2	Slightly influential	46
3	Moderately influential	35
4	Very influential	8

Mode = 2

15. overall, how influential are social media influencers in your daily life ?

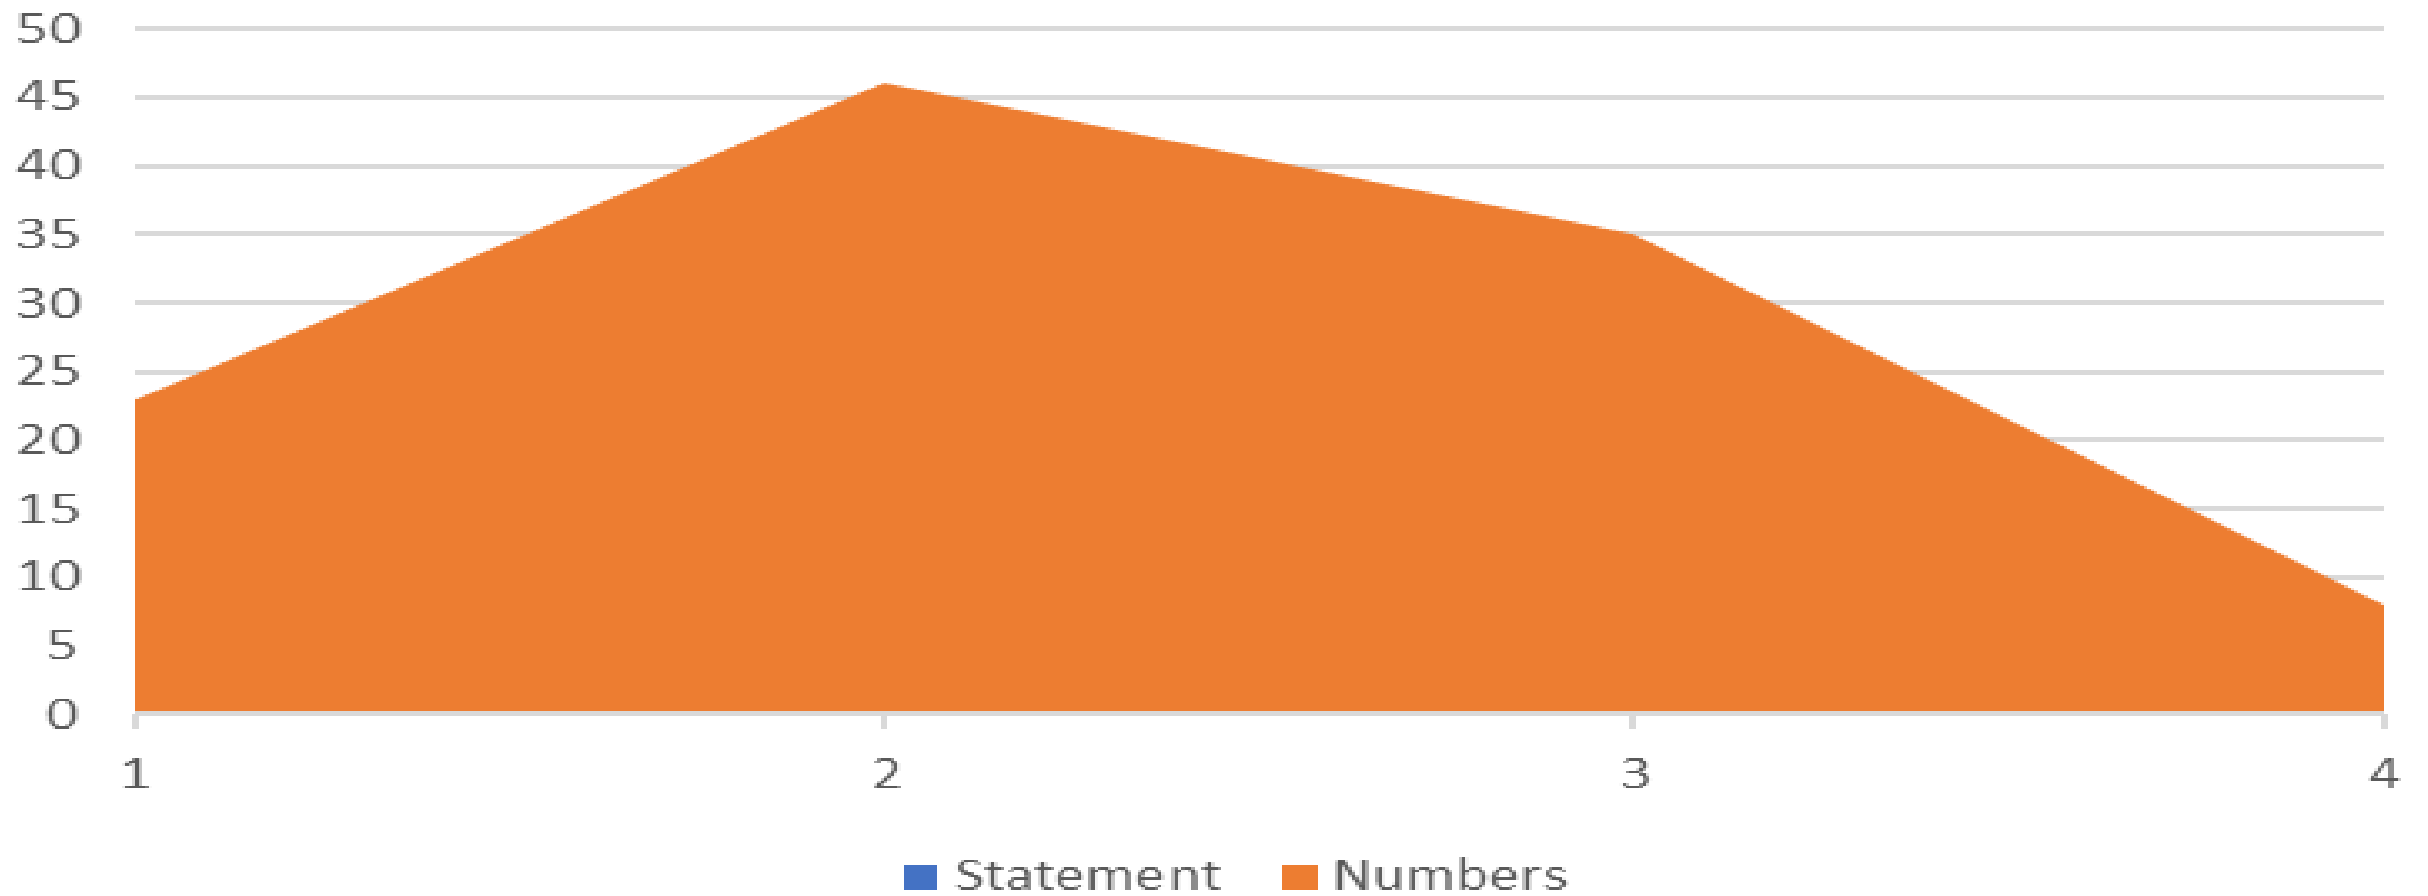

112 responses

Skewness 0.170235815

Kurtosis -0.660293168

Level of impact of social media influencers

Inferences: The people have said that they are slightly-moderately influenced.

Insights: 20.5% of the sample has chosen zero influence, might be due to personality differences.

Recommendations: Would recommend influencers to be transparent, truthful, and not promote harmful products.

Improvements measures, addition of new questions

1. Collect the data sooner
2. Could have asked numerical data
3. Could have done other types of analyses that I do not know yet
4. Could have created better charts that represents the data more accurately

Mistakes done

Created a survey called “Artificial Intelligence impact on future”. Maybe too complicated, only got 40 responses after 20 days.

Collected data too late.

Could have started sooner, rushed it a little bit.

Did numerical analyses for categorical data at first, removed it after ma'am had mentioned it.

Conclusion

Most have chosen slight influence over moderate, and no influence over high influence. I would conclude that people are quite sceptical about social media influencers.

Thank you.
